Exploring Synergies and Trade-offs between Climate Change and the Sustainable Development Goals V.

Venkatramanan, Shachi Shah, Ram Prasad, 2020-11-16 The existential environmental crisis prompted the United Nations to formulate the Millennium Development Goals at the turn of the 21st century in order to embark on an era of sustainable development. The progress and deficiencies in achieving the Millennium Development Goals provided impetus to the intelligentsia and policymakers to map out the pertinent goals for a sustainable growth trajectory for humanity and the planet. The United Nations 2030 Agenda for Sustainable Development, which was adopted in September 2015, took the shape of 17 Sustainable Development Goals (SDGs) and 169 targets. In effect, the 17 Sustainable Development Goals focus on protecting the earth's life support systems for intra and inter generational equity and for development that is rooted in sustainability science. Attaining these goals is an uphill task; nevertheless, scientific knowledge transfer and interdisciplinary inquiries, concerted global action, and capacity building would provide an enabling environment for achieving the SDGs. This book explores the synergies and trade-offs between climate change management and other SDGs. It highlights the policy imperatives as well as the interrelations between combating climate change and its impacts: SDG 13 and food and nutritional security, SDG 2 water security, SDG 6 soil security, SDG 15 energy security, SDG 7 poverty eradication, SDG 1 gender equality, SDG 5 resilient infrastructure, SDG 9 and sustainable and resilient cities, SDG 11.
