Questions the promises and pitfalls of associating beauty with truth showing how ideas of mathematical elegance have inspired and have sometimes misled scientists attempting to understand nature The author also shows how the ancient Greeks constructed a concept of the world based on musical harmony *The Evolutionary Strategies that Shape Ecosystems* J. Philip Grime, Simon Pierce, 2012-03-26 THE EVOLUTIONARY STRATEGIES THAT SHAPE ECOSYSTEMS In 1837 a young Charles Darwin took his notebook wrote I think and then sketched a rudimentary stick like tree Each branch of Darwin's tree of life told a story of survival and adaptation adaptation of animals and plants not just to the environment but also to life with other living things However more than 150 years since Darwin published his singular idea of natural selection the science of ecology has yet to account for how contrasting evolutionary outcomes affect the ability of organisms to coexist in

communities and to regulate ecosystem functioning In this book Philip Grime and Simon Pierce explain how evidence from across the world is revealing that beneath the wealth of apparently limitless and bewildering variation in detailed structure and functioning the essential biology of all organisms is subject to the same set of basic interacting constraints on life history and physiology The inescapable resulting predicament during the evolution of every species is that according to habitat each must adopt a predictable compromise with regard to how they use the resources at their disposal in order to survive The compromise involves the investment of resources in either the effort to acquire more resources the tolerance of factors that reduce metabolic performance or reproduction This three way trade off is the irreducible core of the universal adaptive strategy theory which Grime and Pierce use to investigate how two environmental filters selecting respectively for convergence and divergence in organism function determine the identity of organisms in communities and ultimately how different evolutionary strategies affect the functioning of ecosystems This book reflects an historic phase in which evolutionary processes are finally moving centre stage in the effort to unify ecological theory and animal plant and microbial ecology have begun to find a common theoretical framework Companion website This book has a companion website www.wiley.com/go/grimeevolutionarystrategies with Figures and Tables from the book for downloading

The Future of Everything David Orrell, 2008-02-26 Hurricane Katrina the internet stock bubble disease outbreaks are these predictable preventable events or are we merely the playthings of chaos A compelling irreverent elegantly written history of our future that addresses the most important issues of our time Apollo's Arrow examines such questions as How well can we predict the future Can past discoveries help us understand tomorrow's weather patterns or tell us what our financial future will look like Will scientists ever be able to forecast catastrophes or will we always be at the mercy of Mother Nature waiting for the next storm epidemic or economic crash to thunder through our lives David Orrell looks back to show us how past scientists and some charlatans predicted the future and where we are on the path to truly understanding what comes next He asks how today's scientists can claim to predict future climate events when even three day forecasts prove a serious challenge Can we predict and control epidemics Can we accurately foresee our financial future Or will we only find out about tomorrow when tomorrow arrives
