Hankins,Robert J. Silverman,2014-07-14 Thomas Hankins and Robert Silverman investigate an array of instruments from the seventeenth through the nineteenth century that seem at first to be marginal to science magnetic clocks that were said to operate by the movements of sunflower seeds magic lanterns ocular harpsichords machines that played different colored lights in harmonious mixtures Aeolian harps a form of wind chime and other instruments of natural magic designed to produce wondrous effects By looking at these and the first recording instruments the stereoscope and speaking machines the authors show that scientific instruments first made their appearance as devices used to evoke wonder in the beholder as in works of magic and the theater The authors also demonstrate that these instruments even though they were often tricks were seen by their inventors as more than trickery In the view of Athanasius Kircher for instance the sunflower clock was not merely a hoax but an effort to demonstrate however fraudulently his truly held belief that the ability of a flower to follow the sun was due to the same cosmic magnetic influence as that which moved the planets and caused the rotation of the earth The marvels revealed in this work raise and answer questions about the connections between natural science and natural magic the meaning of demonstration the role of language and the senses in science and the connections among art music literature and natural science Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Vision and Art with Two Eyes Nicholas Wade, 2023-06-02 This book celebrates binocular vision by presenting illustrations that require two eyes to see the effects of cooperation and competition between them Pictures are flat but by printing them in different colours and viewing them through similarly coloured filters included with the hardcover book they are brought to life either in stereoscopic depth or in rivalry with one another They are called anaglyphs and all those in the book display the ways in which the eyes interact Thus the reader is an integral element in the book and not all readers will see the same things The history science and art of binocular vision can be experienced in ways that are not usually available to us and with images made specifically for this book The study of vision with two eyes was transformed by the invention of stereoscopes in the early 19th century Anaglyphs are simple forms of stereoscopes that have three possible outcomes from viewing them with each eye alone to see the monocular images with both eyes to see them in stereoscopic depth or rivalry or without the red cyan glasses where they can have an appeal independent of the binocularity they encompass Through the binocular pictures and the words that accompany them there will be an appreciation of just how remarkable the processes are that yield binocular singleness and depth Moreover the opportunities for expressing these processes are explored with many examples of truly binocular art

Come funziona la mente Steven Pinker, 2013-08-08T00:00:00+02:00 Perch  ci innamoriamo Come si spiegano le nostre diverse reazioni di fronte all'arte alla filosofia e alla religione Perch  i ricordi svaniscono E dove nascono gli stereotipi etnici oppure la credenza nei fantasmi Le innumerevoli domande sull'origine la natura e il funzionamento della

nostra mente finiscono spesso per perdersi nella vaghezza del mistero Questo invece un libro di risposte Sfidando pregiudizi consolidati e demolendo teoremi un tempo indiscutibili Steven Pinker ci guida alla scoperta dei pi recenti progressi delle scienze cognitive e ricostruisce il programma straordinariamente complesso che rende possibili gli eventi della vita mentale che siamo abituati a dare per scontati le meccaniche del pianto e del riso dell empatia e della percezione visiva Facendo ricorso all ingegneria inversa che si interroga sugli scopi e l organizzazione dei vari elementi che compongono una macchina Pinker individua le funzioni alle quali la selezione naturale ha destinato la mente un sistema di organi di calcolo che ha permesso ai nostri antenati cacciatori raccoglitori di lottare sopravvivere prevalere L approccio di Pinker uno dei pi autorevoli studiosi di scienze cognitive rigoroso e multidisciplinare spazia dalle neuroscienze alla biologia evolutiva compiendo efficaci e frequenti incursioni nelle discipline pi disparate come l economia la psicologia sociale e la letteratura Il risultato una sintesi avvincente e monumentale troppo ricca esatta e pionieristica nei collegamenti e nelle conclusioni per essere ridotta a semplice divulgazione scientifica scritta con l intelligenza il ritmo e l umorismo del grande narratore
