Metamorphosis Ernest G. Schachtel, 2013-04-15 First published in 1959 Metamorphosis remains one of the great works of developmental psychology of the past century From his thoughtful meditation on the assumptions of classical Freudian psychoanalysis among them the pleasure and reality principles the relations of drive and affect and the nature and causes of infantile amnesia Schachtel moves on to profound reflections on the senses considered both in terms of their evolving relation to one another during maturation and as variable ingredients in the perception and cognition of the adult

Human Emotions Carroll E. Izard, 2013-11-11 In recent years especially the past decade in sharp contrast to preceding decades knowledge in the field of emotions has been steadily increasing This knowledge comes from many different specialties Emotion is a truly interdisciplinary subject Workers in the fields of physiology neurology ethology physiological psychology personality and social psychology clinical psychology and psychiatry medicine nursing social work and the clergy are all directly concerned with emotion Professions such as law and architecture have an obvious concern with emotions as they affect human motives and needs The various branches of art especially the performing arts certainly deal with the emotions especially with the expression of emotions Constantine Stanislavsky the Russian theatrical genius revolutionized modern theater by developing a training method for actors and actresses that emphasized creating genuine emotion on the stage the emotion appropriate to the character and the life situation being depicted Indeed one can hardly think of any human activity that is not related in some way to the field of emotion Since the

contributions to the subject of emotions come from so many different disciplines it is difficult to find the important common themes that can yield an understanding of the field as a whole This volume will attempt to make that task easier but I recognize that no one can treat all of the diverse material expertly and in detail My aim will be to represent all important types of contributions and perhaps point the way for further and more intensive study of special topics

Sartre and Magic Daniel O'Shiel,2019-06-27 Jean Paul Sartre s technical and multifaceted concept of magic is central for understanding crucial elements of his early philosophy 1936 1943 not least his conception of the ego emotion the imaginary and value Daniel O Shiel follows the thread of magic throughout Sartre s early philosophical work Firstly Sartre s work on the ego 1936 shows a personal reflective form of consciousness that is magically hypostasized onto the pre reflective level Secondly emotion 1938 is inherently magical for Sartre because emotive qualities come to inhere in objects and thereby transform a world of pragmatism into one of captivation Thirdly analyses of The Imaginary 1940 reveal that anything we imagine is a spontaneous creation of consciousness that has the power to enchant and immerse us even to the point of images holding sway over us Culminating with Sartre s ontological system of Being and Nothingness 1943 O Shiel argues that Sartre does not do away with the concept but in fact provides ontological roots for it This is most evident in Sartre s analyses of value possession and language A second part shows how such Sartrean magic is highly relevant for a number of concrete case studies the arts advertising racism and stupidity and certain instances of psychopathology O Shiel shows that Sartre s magical being is important for any contemporary philosophical anthropology because it is essentially at work at the heart of many of our most significant experiences both creative and damaging
