the title of this conference Crystalline Electric Field and Structural Effects in f Electron Systems reflects best the growth and direction of the field The title and the conference itself go beyond CEF in two broad and important respects First the inter relations between CEF and mode softening distortions due to quadrupolar ordering or the Jahn Teller effect have gained greater focus hence the inclusion of Structural Effects Second much greater emphasis on the actinides and in particular comparisons between actinides and the lighter rare earths is seen in this conference hence the more general terminology f Electron Systems It seems clear that this comparison will lead to an extension to the actinides of mixed valence and Kondo considerations as well as CEF effects The emergence of a broader discipline which includes all f electron systems and which is concerned with unstable as well as stable valence reflects the maturation of the field and a coming to grips with the complexity as well as the unity of f electron systems This maturation is also seen in the growing realization of the effects of CEF on transport thermodynamic properties and superconductivity and its co existence with magnetic order This volume contains 63 articles all but two of which were presented at the Conference held in Philadelphia U S A on 12 15 November 1979 About 100 conferees from 13 countries attended the meeting which consisted of four full days of lecture presentations

Reports of the Cambridge Anthropological Expedition to Torres Straits: Linguistics Alfred Cort Haddon,1907 **Basque Phonology** José Ignacio Hualde,2004-03-01 This book is the first comprehensive treatment of the phonological system of Basque available in English Basque is a morphologically rich and fairly regular language with a number of active phonological rules that are limited to certain morphological environments In addition it has a high degree of dialectal fragmentation These characteristics of Basque make this language a good test ground to investigate the interaction of phonological rules both with each other and with morphological processes which the author does within the Lexical Phonology framework The effects of rule interaction on feature geometry are a major concern how phonological operations modify underlying structures and how the structures created by one phonological rule can serve as input to other rules These effects are examined in a study of the rather peculiar behaviour of Basque affricates Another area which requires particular attention and in which Basque dialects differ widely is prosody Along with stress accent systems of different types Basque also possesses pitch accent or restricted tonal systems in some of its western dialects This book should be of interest to advanced students and teachers of linguistics especially Romance linguistics and lexical phonology
