Finney, Tyrell Mayfield, 2018-10-15 This edited collection will expand upon and refine the ideas on the role of ethics and the profession in the 21st Century The authors delve into whether Samuel Huntington and Morris Janowitz still ring true in the 21st century whether training and continuing education play a role in defining a profession and if there is a universal code of ethics required for the military as a profession *Redefining the Modern Military* is unique in how it treats the subject of ethics and the military profession as well as the types of writers it brings on board to address this topic The book puts a significant emphasis on individual agency for military professionalism as opposed to broad organizational or cultural change Such a review of these topics is necessary because the process of serious intellectual self reflection is a requirement especially in a profession that involves life and death of people and nations *New Global Dangers* Michael Edward

of new oil and natural gas pipelines that Russia is in the process of constructing which will by pass the problematic Ukraine Georgia Poland and the Baltic States in the West and lock in the enormous potential of China in the East Further as the Western economies including the USA begin themselves to recover their growing energy dependence will come back into the forefront and therefore the need to ensure that Russia does not fail in its opening up of new energy resources in the Arctic and Eastern Siberia Russia is no longer a superpower in the Cold War sense of the word because its military is significantly weaker and as such is incapable of conducting a regional let alone global war against either the United States or NATO It is precisely because of its military weakness that Putin has been forced to adopt an asymmetric approach Thus the pipeline spigot and the proliferation of missiles and aircraft have become Russia s weapons of choice along with an ever growing reliance on its strategic nuclear forces to provide it with the necessary deterrent to foreign aggression In addition Putin and Medvedev have no interest in an arms race with the United States it is too costly and detracts from their priority which is economic reform From Putin s perspective America is in the process of imposing absolute security or as Joint Vision 2020 put it full spectrum dominance over the world As the sole remaining superpower the United States enjoys a massive strategic imbalance in its favor which it has used first to contain but now with the intent to control the world How NATO expansion lays the groundwork for a U S global missile defense system to contain perceived adversaries such as Russia which in turn secures the dominance of America through its Prompt Global Strike PGS capability the ability to strike anywhere on the planet with impunity within 90 minutes of the order being given by The President Thus PGS will be to the 21st Century what British Gun Boat Diplomacy was to the 19th Century In such a context Russia is forced to respond asymmetrically

Neither Star Wars nor Sanctuary Michael E. O'Hanlon, 2004-04-23 Space has been militarized for over four decades Should it now be weaponized This incisive and insightful book argues that it should not Since the cold war space has come to harbor many tools of the tactical warfighter Satellites have long been used to provide strategic communication early warning of missile launch and arms control verification The U S armed forces increasingly use space assets to locate and strike targets on the battlefield To date though no country deploys destructive weapons in space for use against space or Earth targets and no country possesses ground based weapons designed explicitly to damage objects in space The line between nonweaponization and weaponization is blurry to be sure but it has not yet been crossed In *Neither Star Wars nor Sanctuary* Michael E O Hanlon makes a forceful case for keeping it this way The United States with military space budgets of around 20 billion a year enjoys a remarkably favorable military advantage in space Pursuing a policy of space weaponization solely in

order to maximize its own military capabilities would needlessly jeopardize this situation by likely hastening development of space weapons in numerous countries. It would also reaffirm the prevalent international image of the United States as a global cowboy of sorts too quick to reach for the gun. O'Hanlon therefore asserts that U.S. military space policy should focus on delaying any movement toward weaponization without foreclosing the option of developing space weapons in the future if necessary. Extreme positions that would either hasten to weaponize space or permanently rule this out are not consistent with technological realities and U.S. security interests.
