Matched By Mistake By Request:

A Mistaken Match Whitney Bailey, 2017-10-01 MATRIMONY MIX UP Hoping for a fresh start Ann Cromwell travels to New Haven Ohio from London England as a mail order bride and learns she's not the wife her groom to be was looking for. Though handsome farmer James McCann is kindly he's made it clear he wants the matchmaking agency to fix their mistake. But if she can't convince him to give her a chance she's not sure where she'll go. James can't imagine why the matchmakers ignored his request for a plain bride. He was burned by a beautiful woman before and he's sure someone as stunning as Ann is unsuited for rural living. While the agency sorts out the error though Ann quietly works her way into James's life but can he ever allow her into his heart.

Matched by Mistake Hanna Jo Abbott, 2025 I wasn't looking for love. Usually I'm just looking for my keys that I've lost for the millionth time. Instead I found a business card for a matchmaking service. Since my own dating history is a spectacular dumpster fire of crazy I figured why not let someone else find me the perfect guy. After filling out a questionnaire longer than my college application the one for a college I never attended I'm pretty sure this matchmaker knows me better than my own mother. Surely she can find my match. The only problem he's nothing like me. Ethan is all about five year plans and organized spreadsheets. And I have five part time jobs because I get bored easily. He overanalyzes everything and I haven't read the fine print in my life. I'm not sure we belong in the same universe let alone on a date. But the matchmaking service must know something I don't. Right? Either that or I just paid good money to be completely totally and epically wrong about love again.

Wilde's WWW Erik Wilde,2012-12-06 What is the difference between a URL and a URI How does HTTP fulfill its task Why do we need XML What is it and will it eventually replace HTML This book gives answers to these questions and a chore of others that may be asked by attentive inhabitants of cyberspace The book is of course not just a glossary of abbreviations and frequently used terms It is rather a comprehensive and still succinct presentation of the technology used in the World Wide Web It is surprising to note that even though hundreds of books have been published that discuss the Web there have been none so far to thoroughly explain the inner workings of this popular Internet application which is so simple to use and yet so complex when it comes to really understand what is going on inside The target audience of this book is perhaps best described by how it was first used by the author himself A draft version was chosen as the supporting text for a class of practitioners who attended a continuing education course on WWW technology These were people who knew what the Web is and how it may be used for business but needed to know how the technology works During the planning for this course the author found that no suitable book was on the market and decided to write one himself

Web Dynamics Mark Levene,Alexandra Poullovassilis,2013-03-09 The World Wide Web has become a ubiquitous global tool used for finding information communicating ideas carrying out distributed computation and conducting business learning and science The Web is highly dynamic in both the content and quantity of the information that it encompasses In order to fully exploit its enormous potential as a global repository of information we need to understand how its size topology and content are evolving This then allows the development of new techniques for locating and retrieving information that are better able to adapt and scale to its change and growth The Web's users are highly diverse and can access the Web from a variety of devices and interfaces at different places and times and for varying purposes We thus also need techniques for personalising the presentation and content of Web based information depending on how it is being accessed and on the specific user's requirements As well as being accessed by human users the Web is also accessed by applications New applications in areas such as e business sensor networks and mobile and ubiquitous computing need to be able to detect and react quickly to events and changes in Web based information Traditional approaches using query based pull of information to find out if events or changes of

interest have occurred may not be able to scale to the quantity and frequency of events and changes being generated and new push based techniques are needed
