Handbook of Matching and Weighting Adjustments for Causal Inference José R. Zubizarreta, Elizabeth A. Stuart, Dylan S. Small, Paul R. Rosenbaum, 2023-04-11 An observational study infers the effects caused by a treatment policy program intervention or exposure in a context in which randomized experimentation is unethical or impractical One task in an observational study is to adjust for visible pretreatment differences between the treated and control groups Multivariate matching and weighting are two modern forms of adjustment This handbook provides a comprehensive survey of the most recent methods of adjustment by matching weighting machine learning and their combinations Three additional chapters introduce the steps from association to causation that follow after adjustments are complete When used alone matching and weighting do not use outcome information so they are part of the design of an observational study When used in conjunction with models for the outcome matching and weighting may enhance the robustness of model based adjustments The book is for researchers in medicine economics public health psychology epidemiology public program evaluation and statistics who examine evidence of the effects on human beings of treatments policies or exposures *Professional jQuery* Cesar Otero, Rob Larsen, 2012-03-20 jQuery is one of the hottest emerging web development technologies Fully supported by Microsoft Google and a who's who list of companies and platforms it simplifies the development of standards based interactive websites This book provides a complete in depth look at jQuery and related technologies providing you with a single source of all the information you need to maximize your web development skills As the book progresses it delves deeper into other topics providing lessons and examples to accomplish tasks common to both basic and advanced web development techniques **Biostatistical Methods** John M. Design of Observational Studies Paul R. Rosenbaum, 2020-07-13 This second edition of Design of Observational Studies is both an introduction to statistical inference in observational studies and a detailed discussion of the principles that guide the design of observational studies An observational study is an empiric investigation of effects caused by treatments when randomized experimentation is unethical or infeasible Observational studies are common in most fields that study the effects of treatments on people including medicine economics epidemiology education psychology political science and sociology The quality and strength of evidence provided by an observational study is determined largely by its design Design of Observational Studies is organized into five parts Chapters 2 3 and 5 of Part I cover concisely many of the ideas discussed in Rosenbaum's Observational Studies also published by Springer but in a less technical fashion Part II discusses the practical aspects of using propensity scores and other tools to create a matched comparison that balances many covariates and includes an updated chapter on matching in R In Part III the concept of design sensitivity is used to appraise the relative ability of competing designs to distinguish treatment effects from biases due to unmeasured covariates Part IV is new to this edition it discusses evidence factors and the computerized construction of more than one comparison group Part V discusses planning the analysis of an observational study with particular reference to Sir Ronald Fisher's striking advice for observational studies make your theories elaborate This new edition features updated exploration of causal influence with four new chapters a new R package DOS2 designed as a companion for the book and discussion of several of the latest matching packages for R In particular DOS2 allows readers to reproduce many analyses from Design of Observational Studies
