The Material Basis of Evolution Richard Goldschmidt,1982-01-01 An eminent geneticist examines the Darwinian theory of evolution analyzes the hereditary differences that produce new species and suggests changes in evolutionary theory based on his biological research

The Mystery of Evolutionary Mechanisms Robert F. Shedinger,2019-06-28 Is Darwinian evolution really the most successful scientific theory ever proposed or even the best idea anyone has ever had as Daniel Dennett once put it The Mystery of Evolutionary Mechanisms provides a comprehensive critical reading of the literature of evolutionary biology from Darwin to Dobzhansky to Dawkins revealing this popular account of evolution to be a grand narrative of Darwinian triumph that greatly overstates the empirical validity of modern evolutionary theory The mechanisms driving the evolutionary process truly remain a mystery more than one hundred fifty years after Origin of Species a fact that can free religion scholars to think in more creative ways about the positive contributions religious reflection might make to our understanding of life s origin and diversity The Mystery of Evolutionary Mechanisms calls for an embrace of mystery understood not as an abdication of the scientific quest for truth but as a courageous and humble acknowledgment of the limits of human reason and an openness to a fundamentally religious orientation toward life

Architecture and Ugliness Wouter Van Acker,Thomas Mical,2020-01-09 Whatever ugliness is it remains a problematic category in architectural aesthetics alternately vilified and appropriated used either to shock or to invert conventions of architecture This book presents sixteen new scholarly essays which rethink ugliness in recent architecture from Brutalism to eclectic postmodern architectural productions and together offer a diverse reappraisal of the history and theory of postmodern architecture and design The essays address both broad theoretical questions on ugliness and postmodern aesthetics as well as more specific analyses of significant architectural examples dating from the last decades of the twentieth century The book attends to the diverse relations between the aesthetic register of ugliness and closely connected aesthetic concepts such as the monstrous the ordinary disgust the excessive the grotesque the interesting the impure and the sublime This volume does not simply document the history of a postmodern anti aesthetic through case

studies Instead it aims to shed light on aesthetic problems that have been largely overlooked in the agenda of architectural theory This book answers in detail the questions How did postmodern architects appropriate troublesome contradictions bound to the raw ugliness of the real How have the ugly and the antiaesthetic been a productive force in postmodern architecture How can ugliness be of value to architecture And how can architecture make good use of ugliness

Niche Tactics Caroline O'Donnell, 2015-04-10 Niche Tactics aligns architecture's relationship with site with its ecological analogue the relationship between an organism and its environment Bracketed between texts on giraffe morphology ecological perception ugliness and hopeful monsters architectural case studies investigate historical moments when relationships between architecture and site were productively intertwined from the anomalous city designs of Francesco de Marchi in the sixteenth century to Le Corbusier's near eradication of context in his Plan Voisin in the twentieth century to the more recent contextualist movements Extensively illustrated with 140 drawings and photographs Niche Tactics considers how attention to site might create a generative language for architecture today
