important to know their behaviors in order to maximize product performance to cost efficiency Examples of many different designed products are reviewed They range from toys to medical devices to cars to boats to underwater devices to containers to springs to pipes to buildings to aircraft to space craft The reader's product to be designed can directly or indirectly be related to product design reviews in the book Important are behaviors associated and interrelated with plastic materials thermoplastics thermosets elastomers reinforced plastics etc and fabricating processes extrusion injection molding blow molding forming foaming rotational molding etc They are presented so that the technical or non technical reader can readily understand the interrelationships

The Social Life of Materials Adam Drazin, Susanne Küchler, 2020-06-08 Materials play a central role in society Beyond the physical and chemical properties of materials their cultural properties have often been overlooked in

anthropological studies finished products have been perceived as social yet the materials which comprise them are considered raw or natural The Social Life of Materials proposes a new perspective in this interdisciplinary field Diverting attention from the consumption of objects the book looks towards the properties of materials and how these exist through many transformations in a variety of cultural contexts Human societies have always worked with materials However the customs and traditions surrounding this differ according to the place the time and the material itself Whether or not the material is man made materials are defined by social intervention Today these constitute one of the most exciting areas of global scientific research and innovation harboring the potential to act as key vehicles of change in the world But this materials revolution has complex social implications Smart materials are designed to anticipate our actions and needs yet we are increasingly unable to apprehend the composite materials which comprise new products Bringing together ethnographic studies of cultures from around the world this collection explores the significance of materials by moving beyond questions of what may be created from them Instead the text argues that the materials themselves represent a shifting ground around which relationships identities and powers are constantly formed and dissolved in the act of making and remaking

Provocative Plastics Susan Lambert, 2021-01-07 Plastics have now been our most used materials for over fifty years This book adopts a new approach exploring plastics contribution from two perspectives as a medium for making and their value in societal use The first approach examines the multivalent nature of plastics materiality and their impact on creativity through the work of artists designers and manufacturers The second perspective explores attitudes to plastics and the different value systems applied to them through current research undertaken by design materials and socio cultural historians The book addresses the environmental impact of plastics and elucidates the ways in which they can and must be part of the solution The individual viewpoints are provocative and controversial but together they present a balanced and scholarly un picking of the debate that surrounds this ubiquitous group of materials The book is essential reading for a wide academic readership interested in the Arts and Humanities especially Design and Design History Anthropology and Cultural Material and Social Histories

Plastic Capitalism Amanda Boetzkes, 2019-03-19 An argument for the centrality of the visual culture of waste as seen in works by international contemporary artists to the study of our ecological condition Ecological crisis has driven contemporary artists to engage with waste in its most non biodegradable forms plastics e waste toxic waste garbage hermetically sealed in landfills In this provocative and original book Amanda Boetzkes links the increasing visualization of waste in contemporary art to the rise of the global oil economy and the emergence of ecological thinking Often when art is analyzed in relation to the political scientific or ecological climate it is considered merely illustrative Boetzkes argues that art is constitutive of an ecological consciousness not simply an extension of it The visual culture of waste is central to the study of the ecological condition Boetzkes examines a series of works by an international roster of celebrated artists including Thomas Hirschhorn Francis Al s Song Dong Tara Donovan Agn s Varda Gabriel Orozco and Mel Chin among others mapping waste art from its modernist origins to the development of a new waste imaginary generated by contemporary artists Boetzkes argues that these artists do not offer a predictable or facile critique of consumer culture Bearing this in mind she explores the ambivalent relationship between waste both aestheticized and reviled and a global economic regime that curbs energy expenditure while promoting profitable forms of resource consumption

Plastic Legacies Trisia Farrelly ,Sy Taffel ,Ian Shaw , 2021-07-12 There is virtually nowhere on earth that remains untouched by plastics and the situation presents a serious threat to our

natural world Despite the magnitude of the problem the interventions most often put in place are consumer led and market based and only nominally capable of addressing the issue As the problem worsens and neoliberal ideologies limit the world's responses to this crisis there is a growing need for legislative frameworks that attend to the complex social and ecological issues associated with plastics The contributors to this volume bring expertise from across academic disciplines to illustrate how plastics are produced consumed and discarded and to find holistic and integrated approaches that demonstrate an understanding of the wide ranging problem From the plasticization of earth's oceans to the endocrine disrupting chemicals that have the potential to seriously harm life as we know it these essays beg the question that we all must answer what is our plastic legacy With contributions by Imogen E Napper Sabine Pahl Richard C Thompson Sasha Adkins Stephanie B Borrelle Jennifer Provencher Tina Ngata Sven Bergmann Christina Gerhardt Elyse Stanes Tridibesh Dey Mike Michael Laura McLauchlan Johanne Tarpgaard Deirdre McKay Padmapani Perez Lei Xiaoyu and John Holland *Handbook of Bioplastics and Biocomposites Engineering Applications* Srikanth Pilla, 2011-09-15 This Handbook is the first to explore the extensive applications made with bioplastics Civil Engineering Biomedical Automotive General Engineering The majority of the chapters review the properties processing characterization synthesis and applications of the bio based and biodegradable polymers and composites including Polymers such as polylactic acid PLA polyhydroxybutyrate PHB guar gum based plastics cellulose polyesters starch based bioplastics vegetable oil derived bioplastics biopolyethylene chitosan etc Thermoplastic and thermosetting bioplastics and biocomposites with a focus on the automobile industry The ways how to improve the properties of bioplastics polymer blends and biocomposites by combining them with both synthetic and natural fillers and reinforcements such as nanoclays nanotubes CNTs and natural fibers both wood and plant fibers Studies that expand the boundaries of bioplastics that will allow for the new materials to be applied to most generic engineering applications The Handbook will be of central interest to engineers scientists and researchers who are working in the fields of bioplastics biocomposites biomaterials for biomedical engineering biochemistry and materials science The book will also be of great importance to engineers in many industries including automotive biomedical construction and food packaging
