## **Materialist Metaphysics Of The Human Person:**

**A Materialist Metaphysics of the Human Person** Hud Hudson, 2018-10-18 Hud Hudson presents an innovative view of the metaphysics of human persons according to which human persons are material objects but not human organisms. In developing his account he formulates and defends a unique collection of positions on parthood, persistence, vagueness, composition, identity, and various puzzles of material constitution. The author also applies his materialist metaphysics to issues in ethics and in the philosophy of religion. He examines the implications for ethics of his metaphysical views, for standard arguments addressing the moral permissibility of our treatment of human persons and their parts, fetuses and infants, the irreversibly comatose and corpses. He argues that his metaphysics provides the best foundation in the philosophy of religion for the Christian doctrine of the resurrection of the body. Hudson addresses a broad range of metaphysical issues, but among his most strikingly original contributions are his defense of the Partist view according to which a material object can exactly occupy multiple overlapping regions of spacetime and his argument for the compatibility of Christianity with a materialistic theory of human persons.

**Christian Physicalism?** , Joshua R. Farris, R. Keith Loftin, 2017-12-26 On the heels of the advance since the twentieth century of wholly physicalist accounts of human persons, the influence of materialist ontology is increasingly evident in Christian theologizing. To date, the contemporary literature has tended to focus on anthropological issues, e.g. whether the traditional soul/body distinction is viable, with occasional articles treating physicalist accounts of such doctrines as the Incarnation and Resurrection of Jesus cropping up as well. Interestingly, the literature to date, both for and against this influence, is dominated by philosophers. The present volume is a collection of philosophers and theologians who advance several novel criticisms of this growing trend toward physicalism in Christian theology. The present collection definitively shows that Christian physicalism has some significant philosophical and theological problems. No doubt all philosophical anthropologies have their challenges, but the present volume shows that Christian physicalism is most likely not an adequate accounting for essential theological topics within Christian theism. Christians then should consider alternative anthropologies.

*Personal Identity and Resurrection* Georg Gasser, 2016-09-17 What happens to us when we die? According to Christian faith, we will rise again, bodily, from the dead. This claim raises a series of philosophical and theological conundrums: is it rational to hope for life after death in bodily form? Will it truly be we who are raised again, or will it be post-mortem duplicates of us? How can personal identity be secured? What is God's role in resurrection and everlasting life? In response to these conundrums, this book presents the first ever joint work of leading philosophers and theologians on life after death. This is an impressive demonstration of interdisciplinary cooperation between philosophy and theology. Various models are offered which depict what resurrection into an incorruptible post-mortem body might look like. Therefore, this book is an indispensable resource for anyone interested in the doctrine of bodily resurrection, be they philosophers, theologians, scholars in religious studies, or believers interested in examining their faith.

*On Human Persons* Klaus

Petrus,2013-05-02 There is no question We are all persons But what exactly are persons Are we immaterial souls or Cartesian Egos which only contingently have bodies Or are persons nothing over and above their bodies Are they essentially or most fundamentally animals evolved beings of a certain sort Or are we something other or more than animals namely constituted beings with a certain capacity that distinguishes persons from everything else What is necessary and what is sufficient for an entity to be classified or re identified as a person What s the value of an analysis of such biological or psychological conditions What does it contribute to our understanding of ourselves as free agents or as beings wanting to live their individual live The essays collected in this anthology try to answer these questions They are primarily concerned with the metaphysics of persons and the criteria of personal identity but also touch on problems of the theory of action and of practical philosophy

*Potentiality* John P. Lizza,2014-02-15 Classic articles and newly commissioned chapters analyze the nature of potentiality in bioethics What is the moral status of humans lacking the potential for consciousness The concept of potentiality often tips the scales in life and death medical decisions Some argue that all human embryos have the potential to develop characteristics such as consciousness intellect and will that we normally associate with personhood Individuals with total brain failure or in a persistent vegetative state are thought to lack the potential for consciousness or any other mental function Or do they In *Potentiality* John Lizza gathers classic articles alongside newly commissioned chapters from leading thinkers who analyze the nature of potentiality in bioethics a concept central to a number of important debates The contributors illustrate how considerations of potentiality and potential persons complicate the analysis of the moral consideration of persons at the beginning and end of life A number of works explicitly uncover the Aristotelian background of the concept while others explore philosophical issues about persons dispositions and possibility The common assumption that potentiality is intrinsic to whatever has the potentiality is challenged by a relational view of persons an extrinsic account of dispositions and attention to how extrinsic factors affect realistic possibilities Although potentiality has figured prominently in bioethical literature it has not received a great deal of logical semantic and metaphysical analysis in contemporary philosophical literature This collection will bring these thorny philosophical issues to the fore Incorporating cutting edge research on the topic of potentiality this thought provoking collection will interest bioethicists philosophers health care professionals attorneys engaged in medical and health issues and hospital and governmental committees who advise on policy and law concerning issues at the beginning and end of life

**Jesus in an Age of Enlightenment** Jonathan C. P. Birch, 2019-07-18 This book explores the religious concerns of Enlightenment thinkers from Thomas Hobbes to Thomas Jefferson Using an innovative method the study illuminates the intellectual history of the age through interpretations of Jesus between c 1650 and c 1826

The book demonstrates the persistence of theology in modern philosophy and the projects of social reform and amelioration associated with the Enlightenment. At the core of many of these projects was a robust moral theological realism sometimes manifest in a natural law ethic but always associated with Jesus and a commitment to the sovereign goodness of God. This ethical orientation in Enlightenment discourse is found in a range of different metaphysical and political identities: dualist and monist, progressive and radical, which intersect with earlier heretical tendencies in Christian thought: Arianism, Pelagianism, and Marcionism. This intellectual matrix helped to produce the discourses of irenic toleration which are a legacy of the Enlightenment at its best.

Mereology and the Sciences Claudio Calosi, Pierluigi Graziani, 2014-06-02. This volume is the first systematic and thorough attempt to investigate the relation and the possible applications of mereology to contemporary science. It gathers contributions from leading scholars in the field and covers a wide range of scientific theories and practices, such as physics, mathematics, chemistry, biology, computer science, and engineering. Throughout the volume, a variety of foundational issues are investigated both from the formal and the empirical point of view. The first section looks at the topic as it applies to physics. The section addresses questions of persistence and composition within quantum and relativistic physics and concludes by scrutinizing the possibility to capture continuity of motion as described by our best physical theories within gunky space-times. The second part tackles mathematics and shows how to provide a foundation for point-free geometry of space, switching to fuzzy logic. The relation between mereological sums and set-theoretic suprema is investigated, and issues about different mereological perspectives, such as classical and natural mereology, are thoroughly discussed. The third section in the volume looks at natural science. Several questions from biology, medicine, and chemistry are investigated. From the perspective of biology, there is an attempt to provide axioms for inferring statements about thethood between two biological entities from

statements about their spatial relation From the perspective of chemistry it is argued that classical mereological frameworks are not adequate to capture the practices of chemistry in that they consider neither temporal nor modal parameters The final part introduces computer science and engineering A new formal mereological framework in which an indeterminate relation of part hood is taken as a primitive notion is constructed and then applied to a wide variety of disciplines from robotics to knowledge engineering A formal framework for discrete mereotopology and its applications is developed and finally the importance of mereology for the relatively new science of domain engineering is also discussed
