Materials Enabled Designs Michael Pfeifer, 2009-06-02 There are books aplenty on materials selection criteria for engineering design Most cover the physical and mechanical properties of specific materials but few offer much in the way of total product design criteria This innovative new text reference will give the Big picture view of how materials should be selected not only for a desired function but also for their ultimate performance durability maintenance replacement costs and so on Even such factors as how a material behaves when packaged shipped and stored will be taken into consideration For without that knowledge a design engineer is often in the dark as to how a particular material used in particular product or process is going to behave over time how costly it will be and ultimately how successful it will be at doing what is supposed to do This book delivers that knowledge Brief but comprehensive review of major materials functional groups mechanical electrical thermal chemical by major material categories metals polymers ceramics composites Invaluable guidance on selection criteria at early design stage including such factors as functionality durability and availability Insight into lifecycle factors that affect choice of materials beyond simple performance specs including manufacturability machinability shelf life packaging and even shipping characteristics Unique help on writing materials selection specifications

struggle to find ways to increase productivity Machining recommendations provided in this book cover turning since it allows removing more material per unit of time and consuming more power at the roughing operations than end milling boring or drilling Machining recommendations relate to cutting speeds feed rates and depth of cuts Such recommendations depend on the workpiece material properties and the cutting tool material Workpiece materials described in this book are the most commonly used grades of carbon alloy stainless tool and maraging steels Cutting tool materials are cemented carbides cermets and ceramics
