National Aeronautics and Space Administration,1986     **Using the Engineering Literature, Second Edition** Bonnie A. Osif,2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of Using the Engineering Literature used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age Using the Engineering Literature Second Edition provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format     Applied Mechanics Reviews ,1972     **Aerospace Alloys** Stefano Gialanella,Alessio Malandrucolo,2019-10-30 This book presents an up to date overview on the main classes of metallic materials currently used in aeronautical structures and propulsion engines and discusses other materials of potential interest for structural aerospace applications The coverage encompasses light alloys such as aluminum magnesium and titanium based alloys including titanium aluminides steels superalloys oxide dispersion strengthened alloys refractory alloys and related systems such as laminate composites In each chapter materials properties and relevant technological aspects including processing are presented Individual chapters focus on coatings for gas turbine engines and hot corrosion of alloys and coatings Readers will also find consideration of applications in aerospace related fields The book takes full account of the impact of energy saving and environmental issues on materials development reflecting the major shifts that have occurred in the motivations guiding research efforts into the development of new materials systems Aerospace Alloys will be a valuable reference for graduate students on materials science and engineering courses and will also provide useful information for engineers working in the aerospace metallurgical and energy production industries     **PB [report]** United States.
