Materials In World Perspective Assessment:

Process Modelling of Metal Forming and Thermomechanical Treatment Claudio R. Boer, Nuno M.R.S. Rebelo, Hans A.B. Rydstad, Günther Schröder, 2012-12-06 It is the objective of the series II Materials Research and Engineering II to publish information on technical facts and processes together with specific scientific models and theories Fundamental considerations assist in the recognition of the origin of properties and the roots of processes By providing a higher level of understanding such considerations form the basis for further improving the quality of both traditional and future engineering materials as well as the efficiency of industrial operations In a more general sense theory helps to integrate facts into a framework which ties relations between physical equilibria and mechanisms on the one hand product development and economic competition on the other Aspects of environmental compatibility conservation of resources and of socio cultural interaction form the final horizon a subject treated in the first II volume of this series II Materials in World Perspective The four authors of the present book endeavor to present a comprehensive picture of process modelling in the important field of metal forming and thermomechanical treatment The reader will be introduced to the rapidly growing new field of application of computer aided numerical methods to the quantitative simulation of complex technical processes Extensive use is made of the state of scientific knowledge related to materials behavior under mechanical stress and thermal treatment Global Material Resources Outlook to 2060 Economic Drivers and Environmental Consequences OECD, 2019-02-12 This report presents global projections of materials use and their environmental consequences providing a quantitative outlook to 2060 at the global sectoral and regional levels for 61 different materials biomass resources fossil fuels metals and non metallic minerals It explains the **A Handbook of Industrial Ecology** Robert U. Ayres, Leslie Ayres, 2002-01-01 The editors of this handbook have brought together 58 of the world's greatest environmental systems experts These professionals have in 46 specific topic headings divided into six major sections provided very insightful information and guidance as to what industrial ecology entails how it can be implemented and its benefits a very valuable tool This book provides essential information to mid and top level management that can enable industry to make more prudent business decisions regarding the manufacturing of its products Robert John Klancko Environmental Practice Industrial ecology is coming of age and this superb book brings together leading scholars to present a state of the art overviews of the subject **OECD Environmental Outlook to 2030** OECD, 2008-03-05 The OECD Environmental Outlook to 2030 provides analyses of economic and environmental trends to 2030 and simulations of policy actions to address the key challenges **Ambiguities in Decision-oriented Life Cycle Inventories** Frank Werner, 2006-03-30 In an environmental life cycle assessment of products LCA an unambiguous scientifically based objective attribution of material and energy flows to a product is pure fiction This is due to the fundamental epistemological conditions of LCA as a modelling process under the complexity of our socio economic system Instead various mental models and values guide this attribution This leads to a

functional model in a specific decision situation This book shows for the first time how mental models and values influence this attribution in the life cycle inventory step of LCA One of the key findings is that the different management rules for a sustainable use of materials must be taken into account for the attribution of material and energy flows to a product Otherwise improvement options recommended by an LCA might turn out to even worsen the environmental situation if reassessed from a meta perspective As a consequence of this book the claim of unambiguity objectivity of the life cycle inventory must be abandoned A group model building process for LCA is developed that allows one to grasp the decision makers mental models and values in the inventory analysis on a case and situation specific basis Only by this LCA results will become relevant in a decision making process Two case studies on the modelling of recycling and other end of life options of aluminium windows and beech wood railway sleepers in LCA complement the methodological part This book is a must have for researchers consultants and practitioners in the fields of decision oriented life cycle assessment as well as product related environmental management modelling and decision making
