Oral Storytelling and Teaching Mathematics Michael Schiro, 2004-03-19 Click Additional Materials for downloadable sample This book presents two stories created by Michael Schiro and told by Doris Lawson in her mathematics classroom The authors lay a foundation for weaving together mathematics and an epic story The purpose of telling an epic story one that takes several days to finish is to guide students through several stages of learning in order to help them develop mathematical skills The story not only presents mathematical skills that students need to learn but also situates the mathematics in a context that is interesting engaging and relevant Part 1 The Wizard's Tale discusses teaching addition and multidigit number The full story with commentary is presented This story is intended primarily for second third and fourth grade students Part 2 The Egypt Story connects problem solving and the social studies curriculum by exploring ancient Egypt This story has been used with sixth graders An accompanying CD contains the complete text of each story and the worksheets used during the lesson Various other materials needed are also described If it is true that every teacher is an actor or actress at heart the challenge to develop one's oral story telling skills is intriguing Equally important however is the rich discussion about such issues as the structural relationship among teachers students and mathematics the pedagogical issues in teaching and learning mathematics mathematics and culture multicultural mathematics instruction and ideology I would definitely recommend this book to all those who teach mathematics Jean Morrow Emporia State University

epic oral stories to teach math to elementary and middle school students The book also includes theoretical discussions of essential elements of oral storytelling multicultural education how oral storytelling can help children who have difficulty learning mathematics and mathematical problem solving This book significantly extends two pedagogical movements that have recently influenced mathematics teaching the use of physical manipulatives and visual imagery and the use of children's literature It takes a giant leap in leaving behind the written word for oral language and integrating serious mathematical explorations with fantasy Author Michael Stephen Schiro presents the teaching of mathematics often a high anxiety subject in a non threatening innovative fashion via the use of epic storytelling It is written in a conversational tone and includes numerous sample illustrations The book's presentation of stories how a teacher actually used them in class along with students responses and a discussion of the educational value of such strategies make this a comprehensive work that recognizes teachers capabilities and concerns about employing the best available educational practices The accompanying CD ROM contains the full text of two epic stories plus additional worksheets handouts and artwork This book will be of immediate interest to both pre service and in service teachers and all educators devoted to providing children powerful mathematical and literary experiences
