Math Wars:

Winning the Math Wars Martin L. Abbott, Brian Ferriso, Karen Smith, 2011-07-01 Washington State is about to enter a new phase of the math wars Since the late 1980s the debate over how best to teach mathematics to schoolchildren has raged worldwide among educators politicians and parents The stakes are high To operate effectively in a global twenty first century economy and polity the United states must provide an education in mathematics that is both excellent and equitable In this volume four scholars at the Washington School Research Center WSRC at Seattle Pacific University present original research drawn from statistical studies of state educational data and from thousands of classroom observations carried out by The BERC Group They assess the current state of math education and review its history and development The authors also provide a dispassionate review of the extensive international national and state literature The in depth observational research in *Winning the Math Wars* confirms that the real issue is neither the approach to teaching traditional or reform nor the type of curriculum If America s goal of educational equity and excellence is to be achieved then math teachers everywhere must be fully supported in developing the specific skills that are ideal for educating all students The authors discussion focus on four principles for improving math teaching and learning fidelity to reform efforts by all involved an emphasis on instruction and instructional tools the critical nature of mathematical knowledge and the need for transformational change *Winning the Math Wars* is an important book for policy makers school leaders practitioners of mathematics education parents and anyone who wants to make sense of the math wars **Math Wars** Carmen

Latterell, 2004-12-30 This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math The debate centers around the standards written by the National Council of Teachers of Mathematics NCTM which call for a radically different approach to mathematics education Because the issues are so heated between the NCTM oriented curricula and traditional curricula the curricula that NCTM oriented replaced the term Math Wars was coined to describe them Parents are concerned about their children s math learning Teachers are concerned about math teaching When parents see what children are bringing home under the new curriculum it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school But the problem goes beyond grades K 12 Post secondary mathematics courses are the fear of many students The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college Besides lack of knowledge about mathematics education many parents have an additional problem in that they feel they lack knowledge in mathematics itself This is very intimidating thus it is difficult for parents to do anything about the confusing state of mathematics education This book provides some answers *The Adventures of Doctor Chess* A. Math Wars Irfan Muzaffar,2009 **Math Education for America?** Mark Wolfmeyer,2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest *Encyclopedia of Cross-Cultural School Psychology* Caroline S. What the Numbers Say Derrick Niederman,David Boyum,2007-12-18 A

decade ago computer scientist Douglas Hofstadter coined the term innumeracy which aptly described the widespread ailment of poor quantitative thinking in American society So in *What the Numbers Say* Derrick Niederman and David Boyum present clear and comprehensible methods to help us process and calculate our way through the world of data smog that we live in Avoiding abstruse formulations and equations Niederman and Boyum anchor their presentations in the real world by covering a particular quantitative idea in relation to a context like probability in the stock market or interest rate percentages And while this information is useful toward helping us to be more financially adept *What the Numbers Say* is not merely about money We learn why there were such dramatic polling swings in the 2000 U S presidential election and why the system of scoring for women s figure skating was so controversial in the 2002 Winter Olympics showing us that good quantitative thinking skills are not only practical but fun

The Truth About Girls and Boys Caryl Rivers,Rosalind C. Barnett,2011-09-27 Caryl Rivers and Rosalind C Barnett are widely acclaimed for their analyses of women men and society In The Truth About Girls and Boys they tackle a new troubling trend in the theorizing of gender that the learning styles brain development motivation cognitive and spatial abilities and natural inclinations of girls and boys are so fundamentally different they require unique styles of parenting and education Ignoring the science that challenges these claims those who promote such theories make millions while frightening parents and educators into enforcing old stereotypes and reviving unhealthy attitudes in the classroom Rivers and Barnett unmake the pseudoscientific rationale for this argument stressing the individuality of each child and the specialness of his or

her talents and desires They recognize that in our culture girls and boys encounter different stimuli and experiences yet encouraging children to venture outside their comfort zones helps them realize a multifaceted character Educating parents teachers and general readers in the true nature of the gender game Rivers and Barnett enable future generations to transform if not transcend the parameters of sexual difference

Tyranny of the Textbook Beverlee Jobrack, 2011-12-23 Educational reforms and standards have been a topic of public debate for decades with the latest go round being the State Common Core Curriculum Standards But time and again those reforms have failed and each set of standards no matter how new and different has had little impact on improving student achievement Why The textbooks Textbooks sell based on design and superficial features not because they are based on the latest research on how children learn and how well they promote student achievement In Tyranny of the Textbook Beverlee Jobrack retired from educational publishing sheds light on why this happens She gives an engaging and fascinating look behind the scenes of how K 12 textbooks are developed written adopted and sold And perhaps most importantly she clearly spells out how the system can change so that reforms and standards have a shot at finally being effective Did you know Reform efforts have focused on writing and rewriting standards and tests but these rarely have any effect on the core curriculum that is published School districts and states don t use effectiveness as a criterion for evaluating and purchasing textbooks Publishers don t offer textbooks with better content or the latest teaching methods because teachers don t want textbooks that require them to change their practices Teachers report that they don t rely on a textbook in their class but research shows that they do Three companies publish 75 percent of the K 12 educational materials Those three companies are producing similar programs with the same instructional strategies none of which require teachers to change their practices significantly Publishers write textbooks for California and Texas All of the other markets have to make do with books only superficially adjusted for their states
