Intellectual Pursuits of Nicolas Rashevsky Maya M. Shmailov, 2016-08-29 Who was Nicolas Rashevsky To answer that question this book draws on Rashevsky's unexplored personal archival papers and shares interviews with his family students and friends as well as discussions with biologists and mathematical biologists to flesh out and complete the picture Most modern day biologists have never heard of Rashevsky Why In what constitutes the first detailed biography of theoretical physicist Nicolas Rashevsky 1899-1972 spanning key aspects of his long scientific career the book captures Rashevsky's ways of thinking about the place mathematical biology should have in biology and his personal struggle for the acceptance of his views It brings to light the tension between mathematicians theoretical physicists and biologists when it comes to the

introduction of physico mathematical tools into biology Rashevsky's successes and failures in his efforts to establish mathematical biology as a subfield of biology provide an important test case for understanding the role of theory in particular mathematics in understanding the natural world With the biological sciences moving towards new vistas of inter and multi disciplinary collaborations and research programs the book will appeal to a wide readership ranging from historians sociologists and ethnographers of American science and culture to students and general readers with an interest in the history of the life sciences mathematical biology and the social construction of science Bibliographia biotheoretica ..., 1954 *Contributions to the Mathematical Biophysics of the Central Nervous System with Special Reference to Learning* Alfonso Shimbel, 1950 International Review of Cytology, 1968 *International Review of Cytology* *Information Processing by Living Organisms and Machines*, 1964 *The Central Nervous System of Vertebrates, Vol. 3/II* H. Schwartz, 1993-08-26 The thirty original contributions in this book provide a working definition of computational neuroscience as the area in which problems lie simultaneously within computer science and neuroscience They review this emerging field in historical and philosophical overviews and in stimulating summaries of recent results Leading researchers address the structure of the brain and the computational problems associated with describing and understanding this structure at the synaptic neural map and system levels The overview chapters discuss the early days of the field provide a philosophical analysis of the problems associated with confusion between brain metaphor and brain theory and take up the scope and structure of computational neuroscience Synaptic level structure is addressed in chapters that relate the properties of dendritic branches spines and synapses to the biophysics of computation and provide a connection between real neuron architectures and neural network simulations The network level chapters take up the preattentive perception of 3 D forms oscillation in neural networks the neurobiological significance of new learning models and the analysis of neural assemblies and local learning grids Map level structure is explored in chapters on the bat echolocation system cat orientation maps primate stereo vision cortical cognitive maps dynamic remapping in primate visual cortex and computer aided reconstruction of topographic and columnar maps in primates The system level chapters focus on the oculomotor system VLSI models of early vision schemas for high level vision goal directed movements modular learning effects of applied electric current fields on cortical neural activity neuropsychological studies of brain and mind and an information theoretic view of analog
