Moving The Masses Urban Public Transit In New York Boston And Philadelphia 1880 191:

Moving the Masses Charles W. Cheape, 1980 The development of public transit is an integral part of both business and urban history in late nineteenth century America The author begins this study in 1880 when public transportation in large American cities was provided by numerous competing horse car companies with little or no public control of operation By 1912 when the study concludes a monopoly in each city operated a coordinated network of electric powered streetcars and in the largest cities subways which were regulated by city and state agencies The history of transit development reflects two dominant themes the constant pressure of rapid growth in city population and area and the requirements of the technology developed to service that growth The case studies here include three of the four cities that had rapid transit during this period Each case study examines first the mechanization of surface lines and second the implementation of rapid transit New York requires an additional chapter on steam powered elevated railroads for early population growth there required rapid transit before the invention of electric technology Urban transit enterprise is viewed within a clear and familiar pattern of evolution the pattern of the last half of the nineteenth century when industries with expanding markets and complex costly processes of production and distribution adopted new strategy and structure administered by a new class of professional managers

Immigrants in the Lands of Promise Samuel L. Baily, 2004 Most studies of immigration to the New World have focused on the United States Samuel L. Baily's eagerly awaited book broadens that perspective through a comparative analysis of Italian immigrants to Buenos Aires and New York City before World War I It is one of the few works to trace Italians from their villages of origin to different destinations abroad Baily examines the adjustment of Italians in the two cities comparing such factors as employment opportunities skill levels pace of migration degree of prejudice and development of the Italian community Of the two destinations Buenos Aires offered Italians more extensive opportunities and those who elected to move there tended to have the appropriate education or training to succeed These immigrants who adjusted more rapidly than their North American counterparts adopted a long term strategy of investing savings in their New World home In New York in contrast the immigrants found fewer skilled and white collar jobs more competition from previous immigrant groups greater discrimination and a less supportive Italian enclave As a result rather than put down roots many sought to earn money as rapidly as possible and send their earnings back to family in Italy Baily views the migration process as a global phenomenon Building on his richly documented case studies the author briefly examines Italian communities in San Francisco Toronto and Sao Paulo He establishes a continuum of immigrant adjustment in urban settings creating a landmark study in both immigration and comparative history
