*Parallel and Distributed Discrete Event Simulation* Carl Tropper, 2002 Discrete event simulation has long been an integral part of the design process of complex engineering systems and the modelling of natural phenomena Many of the systems that we seek to understand or control can be modelled as digital systems In a digital model we view the system at discrete instants of time in effect taking snapshots of the system at these instants For example in a computer network simulation an event can be the sending of a message from one node to another node while in a VLSI logic simulation the arrival of a signal at a gate may be viewed as an event Digital systems such as computer systems are naturally susceptible to this approach However a variety of other systems may also be modelled this way These include transportation systems such as air traffic control systems epidemiological models such as the spreading of a virus and military war gaming models This book is representative of the advances in this field

**Hepatocyte Transplantation** S. Gupta, Peter L.M. Jansen, J. Klempnauer, M.P. Manns, 2002-09-30 In recent years there has been an increasing need for transplantation but the number of donor livers available has increased only slightly despite intensive public relations activities New concepts in the field of transplantation for instance the transplantation of living donor organs or the splitting of organs are urgently required to safeguard the treatment of patients with severe liver disease The development and clinical application of cell therapy for patients with liver disease could soon present a significant enhancement of the therapeutic options The aim of such cell therapy is to repair or improve the biological function of the chronically and acutely damaged liver Even though systematic trials are not available individual case reports and small series already show promising clinical results Present concepts of cell therapy for liver diseases based on the use of primary hepatocytes have recently been considerably extended through new data on the biology of stem cells The adult haematopoietic stem cell as a pool for hepatocyte grafts what would be the perspectives for the clinical application This book is the proceedings of the Falk Symposium No 126 on Hepatocyte Transplantation Progress in Gastroenterology and Hepatology Part III held in Hannover Germany October 2 3 2001 and is a forum for basic research but also for questions concerning clinical applications in the field of hepatocyte transplantation
