Parallel Processing for Jet Engine Control Haydn A. Thompson, 2012-12-06 Parallel Processing Applications for Jet Engine Control is a volume in the new Advances in Industrial Control series edited by Professor M J Grimble and Dr M A Johnson of the Industrial Control Unit University of Strathclyde The book describes the mapping and load balancing of gas turbine engine and controller simulations onto arrays of transputers It compares the operating system for transputers and the Uniform System upon the Butterfly Plus computer The problem of applying formal methods to parallel asynchronous processors is addressed implementing novel fault tolerant systems to meet real time flight control requirements The book presents real time closed loop results highlighting the advantages and disadvantages of Occam and the transputer Readers will find that this book provides valuable material for researchers in both academia and the aerospace industry

Automatic Control in Aerospace 1992 D.B. DeBra, E. Gottzein, 2017-01-11 Space vehicles have become increasingly complex in recent years and the number of missions has multiplied as a result of extending frontiers in the exploration of our planetary system and the universe beyond The advancement of automatic control in aerospace reflects these developments Key areas covered in these proceedings include the size and complexity of spacecrafts and the increasingly stringent performance requirements to be fulfilled in a harsh and unpredictable environment the merger of space vehicles and airplanes into space planes to launch and retrieve payloads by reusable winged vehicles and the demand to increase space automation and autonomy to reduce human involvement as much as possible in manned man tended and unmanned missions This volume covers not only the newly evolving key technologies but also the classical issues of guidance navigation and control *High performance computing and networking* Wolfgang Gentzsch, Uwe Harms, 1994 Annotation High performance computing and networking HPCN is driven by several initiatives in Europe the United States and Japan In Europe several groups encouraged the Commission of the European Communities to start an HPCN programme This two volume work presents the proceedings of HPCN Europe 1994 Volume 1 includes sections on keynote talks HPCN and visualization in industry algorithms for engineering applications electrical computer aided engineering computational fluid dynamics computational chemistry materials science weather simulations environmental applications and climate high energy physics and astrophysics neuroscience and neural networks and database applications **Applied Mechanics Reviews**, 1986

Scientific and Technical Aerospace Reports, 1990 *The White Tornado* Jim Quinn BSc FIMechE, 2018-04-11 This is the inside story of the man who was known as the White Tornado in Rolls Royce Bristol aero engines for he outlines the work he and others carried out over twenty one years during the early concept development and service stages of the Panavia Tornado engines He went on to project manage Rolls Royces first production single crystal turbine blades and then worked on control systems for several years describing these works as the story proceeds A whistle blower he enjoyed Gilbert and Sullivan hang gliding and motorsport and he eventually left RR to work with several charities particularly Headway and

Remap where he describes his experience as an inventive carer of disabled people of all sorts Many years were spent maintaining and renovating church turret Clocks and some of this is reported here As a humanist he has experience of and interest in many things and the book thus contains a variety of challenging thoughts including the nature of biological evolution extraterrestrials too a proposal to reverse engineer formal methods software a proposal for a suitable UK Constitution because nobody knows the hidden one many other proposals for government and thoughts about the European Union and nuclear weapons

Modelling and Simulation of Power Generation Plants Andrzej W. Ordys, A.W. Pike, Michael A Johnson, Reza M. Katebi, Michael J. Grimbale, 2012-12-06 Many large scale processes like refineries or power generation plant are constructed using the multi vendor system and a main co ordinating engineering contractor With such a methodology the key process units are installed complete with local proprietary control systems in place Re assessing the so called lower level control loop design or structure is becoming less feasible or desirable Consequently future competitive gains in large scale industrial systems will arise from the closer and optimised global integration of the process sub units This is one of the inherent commercial themes which motivated the research reported in this monograph To access the efficiency and feasibility of different large scale system designs the traditional tool has been the global steady state analysis and energy balance The process industries have many such tools encapsulated as proprietary design software However to obtain a vital and critical insight into global process operation a dynamic model and simulation is necessary Over the last decade the whole state of the art in system simulation has irrevocably changed The Graphical User Interface GUI and icon based simulation approach is now standard with hardware platforms becoming more and more powerful This immediately opens the way to some new and advanced large scale dynamic simulation developments For example click together blocks from standard or specialised libraries of process units are perfectly feasible now
