**Parasitic Infections in the Compromised Host** Peter D. Walzer, Robert M. Genta, 2020-08-13 The first in a new series created to acknowledge the explosion of knowledge in fields related to infectious diseases and clinical microbiology Thirteen contributions focus on organisms which are of major medical importance in this country or which have contributed to an understanding of pathology

Infections in the Immunocompromised Host Paul Actor, Alan Evangelista, James Poupard, Eileen Hinks, 2012-12-06 The subject matter of this volume the basis for which was a conference held in Philadelphia which focused on the subject of infections including their diagnosis and treatment in immunocompromised individuals The material is of particular importance today when placed against the background of the rapid spread of acquired immunodeficiency syndrome AIDS The first section dealt with the general subject of the immunocompromised host Here reviewed in detail were the epidemiological and clinical aspects of opportunistic infections in patients with defective immune responses It is widely acknowledged that infections are a major complication of the neoplastic process Cancer bearing patients are more prone to certain kinds of infectious and cancer chemotherapy almost always increases susceptibility to such infections Depending upon the basic disease process of the cancer a specific array of infectious diseases can be predicted Patients altered in thymus derived lymphocyte populations or mononuclear phagocyte capabilities resulting in defects in cell mediated immunity or delayed hypersensitivity become highly susceptible to certain groups of organisms whereas profoundly neutropenic patients usually become infected with different organisms The types of infections noted are relatively predictable for the type of immune defect with some variations according to epidemiological factors Major advances have been made in the early diagnosis and treatment of infectious complications with increasingly effective antimicrobial agents and increasing knowledge of their use The application of so called preventive procedures has had limited value to date including immunotherapy which appears to hold much promise

**Immunological Aspects of Infectious Diseases** G. Dick, 2012-12-06 In the first place may I say how grateful I and others are to those who have contributed chapters for this book all of them are well known for their research on the subject on which they have written and each has indicated the background to his own specialist field by providing an extensive bibliography giving this book a total reference list of over 2 500 Although there have been enormous advances in immunology over recent years much of the new knowledge in relation to infectious diseases was scattered over the world s literature and is now brought together in a single volume Furthermore while a number of previously unknown infectious diseases have recently been discovered e g Marburg and Lassa virus infections and Legionnaires disease to which many new techniques have been applied there seemed to be no clear statement of the rationale for their use or for their further exploitation in some of the more common infectious diseases which are discussed in this book
