## **Parental Care In Mammals:**

*Parental Care in Mammals* David J. Gubernick, 2013-11-11 The editors of this volume have honored me by their invitation to write its Fore word an invitation extended because of my editing a book on the maternal behavior of mammals in 1963 Much as I would like to think that I had opened a new area of study and so played some part in the appearance of this fine new collection of chapters the facts are quite otherwise That in 1963 I could assemble the efforts of many distinguished investigators shows that the topic had already engaged their attention and had for some years past But even then the topic had origins extending much farther into the past to mention only Wiesner and Sheard's book *Maternal Behavior in the Rat* of 1933 Nevertheless in 1963 it seemed to me that the study of maternal care in mammals had lagged behind the study of other kinds of social behavior The present volume does much to establish parental care of the young as a topic central to an understanding of the relation between ontogeny and phylogeny to the development of the young to the social organization of the species and to its preservation It may now be seen not only as interesting but as a most significant pattern of behavior among mammals

**Parental Care in Mammals** David J. Gubernick, 2014-01-15 [The Evolution of Parental Care](#) Tim H. Clutton-Brock, 2019-12-31 Synthesizing studies of parental care in a wide variety of animals this book is the first attempt to provide general answers to the following important questions Why does the extent of parental care vary so widely between species Why do only females care for eggs and young in some animals only males in others and both parents in a few To what extent is parental care adjusted to variation in its benefits to offspring and its costs to parents How do parents divide their resources between their sons and daughters In this book separate chapters examine the evolution of variation in egg and neonate size of viviparity and other forms of bearing and of differences in the duration of incubation gestation and lactation The book reviews theoretical and empirical predictions concerning the evolution of parental care and examines the extent to which these are supported by empirical evidence The author examines the distribution of parental care among offspring reviews the empirical evidence that parents invest to different extents in their sons and daughters and discusses the degree to which parents manipulate the sex ratio of their progeny in relation to the availability of resources

evolution of parental care based on contributions from some of the top researchers in the field It provides evidence that the dynamic nature of family interactions and particularly the potential for co evolution among family members has contributed to the great diversity of forms of parental care and life histories across as well as within taxa The Evolution of Parental Care aims to stimulate students and researchers alike to pursue exciting new directions in this fascinating and important area of behavioural and evolutionary biology It will be of relevance and use to those working in the fields of animal behaviour ecology evolution and genetics as well as related disciplines such as psychology and sociology

and emotional systems which regulate such behaviors as food intake aggression reproduction reward seeking behaviors and anxiety related behaviors In this book the emphasis is on the research findings obtained from rodents sheep and primates The authors goal of course was to provide a foundation that may help us understand the neurobiology of human parental behavior Indeed the last chapter attempts to integrate the non human research data with some human data in order to make some inroads toward an understanding of postpartum depression child abuse and child neglect Clearly motivational and emotional neuroscience has close ties to psychiatry and this connection will be very evident in the final chapter By understanding the neurobiology of parental behavior we are also delving into neurobiological factors which may have an impact on core human characteristics involved in sociality social attachment nurturing behavior and love In this very violent world it is hard to conceive of a group of characteristics that are more worthy of study
