Parallel Distributed Processing, Volume 2 James L. McClelland, David E. Rumelhart, PDP Research Group, 1987-07-29 What makes people smarter than computers These volumes by a pioneering neurocomputing group suggest that the answer lies in the massively parallel architecture of the human mind They describe a new theory of cognition called connectionism that is challenging the idea of symbolic computation that has traditionally been at the center of debate in theoretical discussions about the mind The authors theory assumes the mind is composed of a great number of elementary units connected in a neural network Mental processes are interactions between these units which excite and inhibit each other in parallel rather than sequential operations In this context knowledge can no longer be thought of as stored in localized structures instead it consists of the connections between pairs of units that are distributed throughout the network Volume 1 lays the foundations of this exciting theory of parallel distributed processing while Volume 2 applies it to a number of specific issues in cognitive science and neuroscience with chapters describing models of aspects of perception memory language and thought

The Symbolic and Connectionist Paradigms John Dinsmore,2014-01-14 The modern study of cognition finds itself with two widely endorsed but seemingly incongruous theoretical paradigms The first of these inspired by formal logic and the digital computer sees reasoning in the principled manipulation of structured symbolic representations The second inspired by the physiology of the brain sees reasoning as the behavior that emerges from the direct interactions found in large networks of simple processing components Each paradigm has its own accomplishments problems methodology proponents and agenda This book records the thoughts of researchers from both computer science and philosophy on resolving the debate between the symbolic and connectionist paradigms It addresses theoretical and methodological issues throughout but at the same time exhibits the current attempts of practicing cognitive scientists to solve real problems

Weigend, 2014-03-05 The result of the 1993 Connectionist Models Summer School the papers in this volume exemplify the tremendous breadth and depth of research underway in the field of neural networks Although the slant of the summer school has always leaned toward cognitive science and artificial intelligence the diverse scientific backgrounds and research interests of accepted students and invited faculty reflect the broad spectrum of areas contributing to neural networks including artificial intelligence cognitive science computer science engineering mathematics neuroscience and physics Providing an accurate picture of the state of the art in this fast moving field the proceedings of this intense two week program of lectures workshops and informal discussions contains timely and high quality work by the best and the brightest in the neural networks field      **Connectionist Approaches to Natural Language Processing** R G Reilly, Noel

Sharkey, 2016-07-22 Originally published in 1992 when connectionist natural language processing CNLP was a new and burgeoning research area this book represented a timely assessment of the state of the art in the field It includes contributions from some of the best known researchers in CNLP and covers a wide range of topics The book comprises four main sections dealing with connectionist approaches to semantics syntax the debate on representational adequacy and connectionist models of psycholinguistic processes The semantics and syntax sections deal with a variety of approaches to issues in these traditional linguistic domains covering the spectrum from pure connectionist approaches to hybrid models employing a mixture of connectionist and classical AI techniques The debate on the fundamental suitability of connectionist architectures for dealing with natural language processing is the focus of the section on representational adequacy The chapters in this section represent a range of positions on the issue from the view that connectionist models are intrinsically unsuitable for all but the associationistic aspects of natural language to the other extreme which holds that the classical conception of representation can be dispensed with altogether The final section of the book focuses on the application of connectionist models to the study of psycholinguistic processes This section is perhaps the most varied covering topics from speech perception and speech production to attentional deficits in reading An introduction is provided at the beginning of each section which highlights the main issues relating to the section topic and puts the constituent chapters into a wider context      **Artificial Intelligence** Jack Copeland, 2015-07-29 Presupposing no familiarity with the technical concepts of

either philosophy or computing this clear introduction reviews the progress made in AI since the inception of the field in 1956 Copeland goes on to analyze what those working in AI must achieve before they can claim to have built a thinking machine and appraises their prospects of succeeding There are clear introductions to connectionism and to the language of thought hypothesis which weave together material from philosophy artificial intelligence and neuroscience John Searle's attacks on AI and cognitive science are countered and close attention is given to foundational issues including the nature of

computation Turing Machines the Church Turing Thesis and the difference between classical symbol processing and parallel distributed processing The book also explores the possibility of machines having free will and consciousness and concludes with a discussion of in what sense the human brain may be a computer      *Information Space (RLE: Organizations)* Max Boisot, 2013-06-26 In this book the author lays the foundations for a new political economy of information The information space or I Space is the conceptual framework in which organizations institutions and cultures are being transformed by new information and communication technologies In the penultimate chapter the I Space s usefulness as an explanatory framework is illustrated with an application a case study of China s modernization Information Space proposes a radical shift in the way that we approach the emerging information age and the implications it holds for societies organizations and individuals
