Safe Work Practices for the Environmental Laboratory Frank R. Spellman, 1998-10-02 Make your environmental lab and lab technicians work practices the safest possible Protect workers from hazardous material they handle on site Protect the civilian population from harm in a hazardous materials emergency Prevent accidents before they happen The purpose of Safe Work Practices for the Environmental Laboratory is twofold 1 For the person designated as the laboratory's Chemical Hygiene Officer or Safety Officer this text is a user friendly reference that will provide a format a template a guide to compliance with OSHA's Laboratory Standard 29 CFR 1910.145 and 2 for the person who is assigned to work in the environmental laboratory this user friendly text provides the information needed not only to perform routine laboratory tasks correctly but also to perform them safely The environmental lab is involved with performing analytical testing and sampling protocols relating to air soil biosolids sludges drinking water wastewater groundwater stormwater waste characterization petroleum products and HRSD NPDES effluent studies Many wastewater treatment plants and water works have their own environmental laboratories These labs primarily perform analysis of process conditions to ensure optimization of the process However even these small labs a few are quite large perform environmental sampling and therefore are environmental labs The actual genesis of the environmental laboratory can be attributed to the environmental regulations that have been generated by USEPA AOAC ASTM NIOSH OSHA and other regulatory and advisory entities The typical environmental laboratory contains several different types of hazards the lab worker must guard against This is the case even though modern environmental laboratories have been designed to take maximum advantage of engineering controls that work to engineer out most hazards The main hazard discussed in this text has to do with hazardous materials dangerous chemicals and compounds and the effect they can have on work practices OSHA is quite specific in regard to protecting the laboratory worker from harm that could result from handling hazardous materials these specifics are discussed in detail throughout this text It is important to point out that this text will provide the user with more than just a safety book For example this text provides the user with a sample Chemical Hygiene Plan it discusses various safe work practices for standard operating procedures normally performed in the environmental laboratory and it discusses procedures to use for emergency response activities such as clean up of chemical spills The bottom line is that probably the most important benefit to be derived from using this text is the exposure the user receives to the lessons and examples presented throughout the text these lessons learned and examples provide information on how to make your environmental laboratory and the performance of your individual work practices safer When you get right down to it isn't this what a safety text should be all about

Exploring the Handling of Critical Work Practices in Rapid Change Contexts Ulrika Harlin,2024-07-01 The accelerating pace of change in our society requires organisations to efficiently manage day to day operations while simultaneously innovating and developing new concepts for the future all within an environment of rapidly evolving circumstances Specifically organisations must quickly be able to handle the work practices that are critical to organisational development and this thesis focuses on the handling of these practices Critical work practices CWP are here defined as operational management practices that are quickly initiated or adjusted either scaled up or down in response to new developmental needs or emerging acute situations Commonly there are limitations to CWPs ingrained in previous structures methods or knowledge The thesis aims to explore the handling of CWPs in rapidly changing contexts and how this handling is enabled or constrained by the influencing organisational factors of active ownership stakeholder collaboration and developmental learning The empirical foundation of the thesis builds on an interactive research approach It utilises data from case studies in two rapid change contexts an industrial startup in the green transformation and organisations response during the initial stages of the COVID 19 pandemic Results from the studies show that organisations demonstrated agility by mobilising resources and fostering collaboration in novel ways guided by overarching objectives that transcended local concerns Identified CWPs were characterised by their innovative nature and various degrees of newness and time constraints which necessitated new approaches and provided opportunities

for adaptive and developmental learning Three conclusions can be drawn from the analysis in the thesis first disruptive changes trigger entrepreneurship and innovations through enhanced space of action and seamless cross collaborations Second the interaction between intermediaries managers and employees fosters a holistic understanding and proactivity Third rapid change contexts stress test organisations where strengths constraints and new opportunities become visualised Theoretically the thesis contributes with a conceptual model highlighting essential factors of organisational conditions and their interconnections An additional contribution is made in introducing the concept of CWP's and identifying prerequisites for handling different forms of such practices in rapid change contexts The practical implications of this research include that different types of CWP's are a source that can be utilised for continuous improvements supporting organisations ability to handle increasing uncertainties Moreover the conceptual model provides analytical support of work practices that intend to contribute to transitions related to development areas such as a circular economy electrification digitalisation and resilience
