A History of Women in Astronomy and Space Exploration Dale DeBakcsy, 2023-05-31 For the last four hundred years women have played a part far in excess of their numerical representation in the history of astronomical research and discovery It was a woman who gave us our first tool for measuring the distances between stars and another who told us for the first time what those stars were made of It was women who first noticed the rhythmic noise of a pulsar the temperature discrepancy that announced the existence of white dwarf stars and the irregularities in galactic motion that informed us that the universe we see might be only a small part of the universe that exists And yet in spite of the magnitude of their achievements for centuries women were treated as essentially second class citizens within the astronomical community contained in back rooms forbidden from communicating with their male colleagues provided with repetitive and menial tasks and paid starvation wages This book tells the tale of how in spite of all those impediments women managed by sheer determination and genius to unlock the secrets of the night sky It is the story of some of science s most hallowed names Maria Mitchell Caroline Herschel Vera Rubin Nancy Grace Roman and Jocelyn Bell Burnell and also the story of scientists whose accomplishments were great but whose names have faded through lack of use Queen Seondeok of Korea who built an observatory in the 7th century that still stands today Wang Zhenyi who brought heliocentrism to China Margaret Huggins who perfected the techniques that allowed us to photograph stellar spectra and thereby completely changed the direction of modern astronomy and Hisako Koyama whose multi decade study of the sun s surface is as impressive a feat of steadfast scientific dedication as it is a rigorous and valuable treasure trove of solar data *A History of Women in Astronomy and Space Exploration* is not only a book however of those who study space but of those who have ventured into it from the fabled Mercury 13 whose attempt to join the American space program was ultimately foiled by betrayal from within to mythical figures like Kathryn Sullivan and Sally Ride who were not only pioneering space explorers but scientific researchers and engineers in their own rights aided in their work by scientists like Mamta Patel Nagaraja who studied the effects of space upon the human body and computer programmers like Marianne Dyson whose simulations prepared astronauts for every possible catastrophe that can occur in space Told through over 130 stories spanning four thousand years of humanity s attempt to understand its place in the cosmos *A History of Women in Astronomy and Space Exploration* brings us at last the full tale of women s evolution from instrument makers and calculators to the theorists administrators and explorers who have while receiving astonishingly little in return given us quite literally the universe **Minimum Enroute IFR Altitudes Over**

Particular Routes and Intersections , *The Canal System Of England: Its Growth And Present Condition, With Particular Reference To The Cheap Carriage Of Goods* H. Gordon Thompson, 2016-09-22 The material from which this little work has been drawn has necessarily been exceedingly various I had at one time thought of indicating the many authorities to whose works I am indebted for information and as far as possible this has been done in the footnotes to the text So

extensive however have been the sources from which my information has been derived that it will hardly be surprising if some have been left unacknowledged May I therefore express my indebtedness to all upon whose experience I have based my argument or from whom I have obtained facts and figures either by direct communication or by a consultation of their works The object of this account of our Canal System has been not so much to discuss each individual waterway but to set forth in order the facts relating to our inland navigations as a whole and to give some idea of the possibilities which lie before the method of transport November 15th 1902 Waiman House 1 Catherine Street Liverpool H The subject of transport is undoubtedly one of the introduction most important questions of the present day The dawn of the Twentieth Century finds the great nations of the world still struggling supremacy for commercial and there can be no doubt that one of the most important factors in this contest is the possession of adequate means of transport The nation having the best means of conveying her merchandise possesses an advantage difficult to estimate and still more difficult to reduce The utility of water as a means of transport has been TIt apparent from a very early age and the adaptation of the channels or canals used by the ancients for irrigation to the much wider purpose namely as a means of transport marked the birth of artificial inland navigations JcJ f Tran8P rt The Canal System of England I HISTORY Early canals From the writings of Herodotus Aristotle Pliny and other ancient historians we learn that canals existed in Egypt before the Christian era and there is reason to believe that at the same early period artificial inland navigation had also been introduced into China Hardly anything however save their existence has been recorded of these early works We know that the Greeks and afterwards three of the Roman Emperors attempted to join the Ionian Sea and the Archipelago by a canal but failed and Pliny mentions that Drusus commanding under Augustus an army which was to march into Germany had a canal made from the now known Rhine to the Issel for the sole purpose of conveying his army it upon introduction Canals appear to have been introduced into Europe into Europe with the advent of the Christian era but for many centuries their employment was very gradual introduction Their first introduction into this country was by the into J England RomanSj when Britain for a period of 400 years was a province of the Roman Empire

Aspects of Independent Romania's Economic History with Particular Reference to

Transition for EU Accession David Turnock, 2016-04-15 After fifteen years of transition in the former communist states of Central and Eastern Europe it has become clear that for a substantial number the objective of reform and restructuring process is a market system in line with membership of the EU In this study the long term economic transformation of Romania is studied offering a detailed narrative and thematic account of events from the nineteenth to the twenty first centuries From the first steps towards large scale industrialisation begun prior to the First World War through the accelerated pace set by the communist regime after 1945 and the uncertainty following its subsequent collapse in 1989 the book addresses a wide range of pertinent issues that have shaped Romania s economic development The study also offers an interpretation of a distinctive phase in the modernisation of post communist Romania supported by economic historical

surveys of the proceeding century as a context for recent restructuring on the eve of EU accession This is linked with trends in the region as a whole so that a broad perspective is maintained throughout the book By highlighting Romania s position as one of more backward accession states and considering in what ways its experience during transition differs from the more developed states of the region this study offers a valuable insight into both the history of Romania and its future prospects Furthermore it provides a valuable case study that can be compared and contrasted with other countries who are likewise still grappling with the legacy of a centralised economy and in the process of adopting a more market orientated approach in order to gain EU membership As such this study will be of interest not only to historians and economists but anyone with an interest in the expansion of the European Union
