River Of Promise River Of Peril The Politics Of Managing The Missouri River:

River of Promise, River of Peril John E. Thorson, 1994 Snaking 2 540 miles from Montana to the Mississippi River the Missouri is the longest waterway in the nation Its basin stretching 530 000 square miles extends broadly into ten states and twenty five Indian reservations For millions of years the river and its tributaries meandered untamed But that irrevocably changed with the passage of the Pick Sloan Plan part of the Flood Control Act of 1944 In *River of Promise River of Peril* John Thorson takes the first comprehensive look at how and why the Missouri River basin now with six major dams and hundreds of miles of navigation canals has become one of the most significantly altered drainage systems in the country He also looks at the consequences The Pick Sloan Plan he argues has not fared well over time particularly in its failure to provide an effective blueprint for regional river management Persistent conflicts over the river he contends illuminate important weaknesses of federalism in dealing with regional resources the most glaring being the exclusion of any proactive role for Indian tribal governments To support his argument Thorson examines the physical demographic and political features of the river basin analyzes the comprehensive river development that gave birth to the Pick Sloan Plan reveals why the original goals of the legislature were never achieved explores the deep seated and continuing tensions between basin governments and investigates how Indian tribes the river s ecology and federalism have been damaged as the river has been developed He also describes the various associations created and later abandoned from the sixties to the eighties and assesses their virtues and limitations Thorson sees in the story of the Missouri River Basin the vertical and horizontal strains of federalism the states chafing against federally mandated and controlled projects exacerbated by the lack of constitutional guidance for handling conflicts among neighboring states and with Indian nations Not just bent on spotlighting problems Thorson also evaluates different approaches for improved river system management and recommends a Missouri River management institution based on environmentally sensitive policies a strong state role and full participation by the basin s tribal governments

The Missouri River Ecosystem National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Missouri River Ecosystem Science, 2002-07-22

The Missouri River Ecosystem Exploring the Prospects for Recovery resulted from a study conducted at the request of the U S Environmental Protection Agency and the U S Army Corps of Engineers The nation s longest river the Missouri River and its floodplain ecosystem experienced substantial environmental and hydrologic changes during the twentieth century The context of Missouri River dam and reservoir system management is marked by sharp differences between stakeholders regarding the river s proper management regime The management agencies have been challenged to determine the

appropriate balance between these competing interests This Water Science and Technology Board report reviews the ecological state of the river and floodplain ecosystem scientific research of the ecosystem and the prospects for implementing an adaptive management approach all with a view toward helping move beyond ongoing scientific and other differences The report notes that continued ecological degradation of the ecosystem is certain unless some portion of pre settlement river flows and processes were restored The report also includes recommendations to enhance scientific knowledge through carefully planned and monitored river management actions and the enactment of a Missouri River Protection and Recovery Act

Using Multi-Criteria Decision Analysis in Natural Resource Management Tony Prato,2017-03-02 Providing useful insights on the use of Multi Criteria Decision Analysis MCDA in natural resource management this book examines a number of empirical applications for several countries and a variety of natural resources It is shown that using MCDA in the management of water forestry wetland and other natural resources can substantially improve the design and implementation of natural resource and environmental policies Stakeholder involvement is also an important determinant of successful resource management and MCDA provides a useful and effective framework

for getting stakeholders involved in resource management decisions Using Multi Criteria Decision Analysis in Natural Resource Management gives in depth analysis of the potential problems in applying these techniques including difficulties eliciting required information lack of suitable measures for environmental variables and the need to develop innovative methods to simplify the use of MCDA

A River in the City of Fountains Amahia K. Mallea, 2018-10-15 Founded as a port at the confluence of two great rivers Kansas City has the waters of the Missouri running through its bloodstream threading expressways delivering drinking water carrying traffic and sewage and emerging most visibly in the city's celebrated fountains Despite or perhaps because of the river's ubiquity the complex and critical nature of its presence can be hard to understand which is precisely why Amahia Mallea's enlightening book is so essential Moving from the city's center to the outer limits of the metropolitan area A River in the City of Fountains offers a clear view of the reach and intricacies of the Missouri River's connection to life in Kansas City The history of this connection is one of science and industry working sometimes at cross purposes to bend the river to the needs of commerce and public health It is a story populated with heroes and villains visionaries and robber barons scientists and civil engineers politicians and activists all with schemes and plans and far reaching ideas about what and whose demands the power of the Missouri should serve And so inevitably it is a story of disparities a story of from one flood to the next the haves staking out higher ground leaving the have nots to the perils of low lying land But what the book also shows us is a slow awakening to the ways in which all those vying for the river's favor are inextricably connected by its course here we see finally a growing awareness of the river's essential role in the health and welfare of the whole urban environment In the end all citizens of Kansas City are both upstream and downstream all are equally dependent on the health of the river What this book helps us see is at last as much the city in the river as the river in the city

A River Flows Through It Selina Ho, 2020-12-17 A River Flows Through It A Comparative Study of Transboundary Water Disputes and Cooperation in Asia explores water disputes in Asia and addresses the question of how states sharing a river system can be incentivized to cooperate Water scarcity is a major environmental societal and economic problem around the world Increasing demand for water as a result of rapid economic development high population growth and density has depleted the world's water resources leading to floods droughts environmental disasters and societal displacement Shared river basins are therefore often a source of tension and conflict between states In regions where relations between countries have historically been conflictual scarce river water resources have exacerbated tensions and have even sparked wars Yet more often than not states sharing a river basin are able to come to some form of agreement whether they are far reaching ones such as water sharing agreements or those that are more limited such as the sharing of hydrological data Why do riparian states cooperate especially when power asymmetries between upstream and downstream countries are characteristic of transboundary river basins How do non state actors affect the management of international rivers What are the conditions that facilitate or hinder cooperation This book wrestles with these questions by exploring water disputes and cooperation in the major river systems in Asia and by comparing them with cases in Africa Europe and the United States This book will be of great value to scholars students and policymakers interested in transboundary water disputes and cooperation hydro diplomacy and river activism It was originally published as special issues of *Water International*

Our History Is the Future Nick Estes, 2023-09-26 Winner of the Oakland Blue Collar PEN Award A work of history a manifesto and an intergenerational story of resistance that shows how two centuries of Indigenous struggle created the movement proclaiming Water is Life In 2016 a small protest encampment at the Standing Rock reservation in North Dakota initially established to block construction of the Dakota Access oil pipeline grew to be the largest Indigenous protest movement in the twenty first century attracting tens of thousands of Indigenous and non Native allies from around the world Its slogan Mni Wiconi Water is Life was about more than just a pipeline Water Protectors knew this battle for Native sovereignty had already been fought many times before and that even after the encampment was gone their anti colonial struggle would continue In *Our History is the Future* Nick Estes traces traditions of Indigenous resistance leading to the NoDAPL movement from the days of the Missouri River trading forts through the Indian Wars the Pick Sloan dams the American Indian Movement and the campaign for Indigenous rights at the United Nations While a historian by trade Estes also draws on observations from the encampments and from growing up as a citizen of the Oceti Sakowin the Nation of the Seven Council Fires making *Our History is the Future* at once a work of history a personal story and a manifesto

Subnational Hydropolitics Scott M. Moore, 2018-06-01 The prospect of international conflict over

water has long been the subject of academic and popular concern but subnational political conflict is considerably more common and almost certainly imposes greater economic and environmental costs. Indeed subnational hydropolitics are an important feature of several large countries including the United States, India and China. Moreover disputes between water users in shared river basins have often persisted despite repeated attempts by central governments to resolve them through both persuasion and coercion. Yet despite the growing threat of water scarcity around the world little research exists on subnational politics of shared water resources. This book attempts to fill the gap by explaining how and why hydropolitics play out within countries as well as between them. Subnational Hydropolitics re-examines the issue of water conflict by examining conflicts at the subnational rather than international level. By examining several in-depth case studies of both conflict and cooperation, Scott Moore argues that increasing subnational water conflict is driven by two inter-linked forces: identity politics which gives subnational politicians a reason to compete over shared water resources and political decentralization which provides them with the tools to do so. To understand politics at the subnational level the book blends insights from both the environmental governance and comparative politics literatures. By examining the challenges many countries face in achieving cooperation over shared water resources the book helps to shed light on different mechanisms and processes for solving cooperation problems at the regional scale, lessons relevant to tackling a wide range of transboundary environmental problems including air pollution, urbanization and ecosystem protection. But at its core this book promises a definitive contribution to the growing sub-field of environmental politics centered on understanding how different countries attempt to solve the problems inherent in governing water resources in shared river basins.
