Rivers Of Change:

Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-12-10 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems

Introducing Large Rivers Avijit Gupta, 2020-01-28 An accessible introduction to large rivers including coverage of the geomorphology hydrology ecology and environments of large river systems This indispensable book takes a structured and global approach to the subject of large rivers covering geomorphology hydrology ecology and anthropogenic environment It offers a thorough foundation for readers who are new to the field and presents enlightening discussions about issues of management at the worldwide scale The book also examines possible future adaptations that may come about due to climate change The book has benefitted from contributions by Professor W J Junk on the ecology of floodplains and Professor Olav Slaymaker on the large arctic rivers *Introducing Large Rivers* is presented in three parts Part 1 provides an introduction to the world s large rivers and their basins It covers source transfer and storage of their water and sediment Pleistocene inheritance the ecology of channels and floodplains deltas and more Several large rivers are discussed in the next part These include the Amazon Mississippi Nile Ganga Brahmaputra System Mekong and Yangtze The last part examines changes in large rivers and our management of river systems It studies anthropogenic alterations such as land use and deforestation in large river basins

structural control systems like dams and reservoirs on channels and ecological changes It finishes with chapters on the management of large rivers covering both technical and political aspects and the future of the world's big river systems

Introducing Large Rivers is ideal as an introductory textbook on large rivers for future earth and environmental scientists and river managers It will also benefit advanced undergraduate and graduate students studying geography geology ecology and river management

Gravel-bed Rivers in the Environment Peter C. Klingeman, Paul D. Komar, Robert L. Beschta, 1998 Read what over 60 internationally recognized authors say about fluvial processes the environment and management of gravel bed rivers Learn about efforts to restore more natural ecosystem functions to adversely impacted rivers And for some mind stretching consider the hydraulic geomorphic implications of cataclysmic floods on Earth and Mars Beginning in 1980 and held at five year intervals these workshops have brought together leading international researchers to present and discuss new results concepts and state of the art methods to analyze fluvial processes in and manage gravel bed rivers The fourth workshop was held at Gold Bar Washington near the dynamic Skykomish River and strikingly beautiful Cascade Mountains Workshop papers and discussions are published to document new concepts and ideas for broad use by those who study manage or have general interests in rivers This fourth Gravel Bed Rivers Workshop covers three focus topics The first topic reviews new developments regarding fluvial processes sediment transport and channel morphology in eight chapters on distinct subjects The second and third focus topics strongly emphasize gravel beds rivers in the environment their influences and their management in the next 19 chapters River

restoration is examined for large European and North American rivers as parts of several of the environment management chapters Seven appended short papers report on research in progress presented at the Workshop in a poster discussion session Also included are two special interest chapters on giving a detailed analysis and morphologic hydraulic interpretation of cataclysmic floods and one summarizing a field exercise in management options for a long braided meandering reach of the Skykomish River near Gold Bar Publisher s description

Geomorphology Mateo Gutierrez,2012-12-07 This book provides a detailed coverage of the landforms of Planet Earth and the processes that shaped them The study of these morphologies some of which formed during past geological periods under environmental conditions very different from those of today makes it possible to reconstruct the evolution of relief and to infer environmental changes that have involved geological media the climate or human activity A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions The development of Geochronology or absolute dating methods is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief making correlations calculating rates and estimating recurrence periods A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic Given this more than probable cause and effect relationship the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society The information that Geomorphology can provide on the recent past Historical Geomorphology may be very useful in making predictions on the activity of these

potentially dangerous processes in the future and on the possible effects of environmental changes The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology To this end the book contains a basic bibliography that can be used for future research In addition applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world

Managing Urban River Ecosystems for Achieving Regional Sustainability in the Pearl River Delta Region Hui Liu, 2024-12-13 This book provides a systematic understanding of urban river management from the perspective of ecosystem health in the Pearl River Delta region of China where rapid socio economic development happens together with exploitation and pollution of the natural environment Urban rivers which used to support navigation and provide water resources to humans now suffer from various kinds of ecosystem degradation and thus create threats to regional sustainability This book treats the urban river as an ecosystem which closely relates to and interacts with humans and defines urban river ecosystem health as a requirement at three levels sensorial fitness living water and affinity with humans which emphasizes more on the human oriented needs The evolution processes of urban river ecosystem health protection can generally be divided into four phases demonstrating the relationships between human activities and UREH status as simple balance uncontrolled imbalance continuous interlocking and stable harmony The relationships between typical urban rivers and humans in the Pearl River Delta region China are then analyzed on both regional and local scales and from lateral time longitudinal and spatial dimensions Intensive human activities together with the intrinsic complex and high density river network result in deteriorating water quality changing hydrological conditions and damaging the river ecosystem in this region From the perspective of political ecology various actors in urban river management include governmental agencies business multilateral institutions ENGOs and grassroots actors whose unequal power relations vary over time and space causing conflicts as well as coordination Especially different governmental agencies are engaged resulting into overlap and gap among their functions as well as spatial discrepancy River Chief System as a new practice of urban river management has strengthened the collaboration effect and got success in river pollution control The spatial scale effect of human activities on urban river water quality is examined implying the necessity of adopting a unified management strategy at the buffer zone scale to protect and restore urban river ecosystem health The target audience of this book includes postgraduate students and researchers who have research interests in as well as government officers whose routine is related to water management
