S Dreaming And The Development Of Consciousness:

Children's Dreaming and the Development of Consciousness David Foulkes, 2009-07-01 David Foulkes is one of the international leaders in the empirical study of children's dreaming and a pioneer of sleep laboratory research with children. In this book which distills a lifetime of study Foulkes shows that dreaming as we normally understand it active stories in which the dreamer is an actor appears relatively late in childhood. This true dreaming begins between the ages of 7 and 9. He argues that this late development of dreaming suggests an equally late development of waking reflective self awareness. Foulkes offers a spirited defense of the independence of the psychological realm and the legitimacy of studying it without either psychoanalytic over interpretation or neurophysiological reductionism. **The Oxford Companion to**

Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges. How does the brain's activity result in the rich phenomenology that characterizes our waking life? Are animals conscious? Why did consciousness evolve? How does science proceed to answer such questions? Can we define what consciousness is? Can we measure it? Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia, delirium or altered states of consciousness? These questions are at the heart of contemporary research in the domain. Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness. In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness. Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain. Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain. Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness. The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon. **The Science and Art of Dreaming** Mark Blagrove, Julia

Lockheart, 2023-02-10 The Science and Art of Dreaming is an innovative text that reviews the neuroscience and psychology of how dreams are produced how they are recalled and their relationship to waking life events and concerns of the dreamer. Featuring beautiful original artwork based on dream representations the book delves deeply into what happens when we dream the works of art we produce when asleep and the relevance of dreaming to science art and film. The book examines the

biological psychological and social causes of dreaming and includes recent advances in the study of nightmares and lucid dreaming It shows how sleep can process memories and that dreams may reflect these processes but also that dreams can elicit self disclosure and empathy when they are shared after waking The playfulness originality and metaphorical content of dreams also link them to art and especially to the cultural movement that has most valued dreams Surrealism The book details the history of scientific research into dreams including a re reading of the two dreams of Freud s patient the feminist hero Dora and also the history of Surrealism and of films that draw on dreams and dream like processes Each chapter starts with a dream narrative and accompanying painting of the dream to highlight aspects of each of the chapter themes This highly engaging book will be relevant to researchers students and lecturers in the fields of psychology neuroscience psychoanalysis consciousness and social evolution It will also be of value within the study and practice of visual art design and film and will be of interest to the general reader and anyone who holds a personal interest in their own dreams

Harris' Developmental Neuropsychiatry James C. Harris, Joseph T. Coyle, 2024 *Harris Developmental Neuropsychiatry* provides updated information to the first edition which defined the field of developmental neuropsychiatry and is the most recent comprehensive textbook in the field *The Dreaming Mind* Melanie G. Rosen, 2024-02-27 *The Dreaming Mind* provides an insightful interdisciplinary approach to the study of dreaming exploring its nature and examining some of the implications of dream states for theories of consciousness cognition and the self Drawing on research from philosophy cognitive science and psychology the book reveals new insights into the sleeping and waking mind It considers philosophical thinking such as extended mind theory theories of consciousness and theories of the self applying these to empirical dream research The book embraces a pluralistic account of dreaming showing how dream experiences can be highly varied in content and cognition and discusses the implications of dreaming for a variety of influential consciousness theories including higher order thought theory global workspace theory and the phenomenal access distinction Alongside imaginative and hallucinatory dreaming the book also discusses vicarious dreaming and its implications for philosophy of the self Offering an integrative approach into our understanding of dreams and the mind this book is essential reading for students and researchers of consciousness dreams philosophy and cognitive sciences as well as anyone who is curious about dreaming

Machine Dreaming and Consciousness J. F. Pagel, Philip Kirshtein, 2017-04-13 *Machine Dreaming and Consciousness* is the first book to discuss the questions raised by the advent of machine dreaming Artificial intelligence AI systems meeting criteria of primary and self reflexive consciousness are often utilized to extend the human interface creating waking experiences that resemble the human dream Surprisingly AI systems also easily meet all human based operational criteria for dreaming These dreams are far different from anthropomorphic dreaming including such processes as fuzzy logic liquid illogic and integration instability all processes that may be necessary in both biologic and artificial systems to extend creative capacity Today multi linear AI systems are being built to resemble the structural framework of the human central nervous

system The creation of the biologic framework of dreaming emotions associative memories and visual imagery is well within our technical capacity AI dreams potentially portend the further development of consciousness in these systems This focus on AI dreaming raises even larger questions In many ways dreaming defines our humanity What is humanly special about the states of dreaming And what are we losing when we limit our focus to its technical and biologic structure and extend the capacity for dreaming into our artificial creations Machine Dreaming and Consciousness provides thorough discussion of these issues for neuroscientists and other researchers investigating consciousness and cognition Addresses the function and role of dream like processing in AI systems Describes the functions of dreaming in the creative process of both humans and machines Presents an alternative approach to the philosophy of machine consciousness Provides thorough discussion of machine dreaming and consciousness for neuroscientists and other researchers investigating consciousness and cognition

Dreaming and Memory: Philosophical Issues Daniel Gregory,Kourken Michaelian,2024-10-22 This edited volume is the first systematic philosophical investigation of the complex and multifarious relationships between dreaming and memory Featuring fifteen contributions by leading researchers it explores a range of issues that arise when dreaming and memory are considered together What does one remember when one remembers what one dreamt and what is it for a memory of a dream to be accurate What are the phenomenological cognitive and epistemic similarities and dissimilarities between dreaming and remembering How does the self figure in dreams and memories The book will serve as an indispensable resource both for philosophers interested in dreaming or memory and for their philosophically minded colleagues in empirical disciplines and will provide an invaluable starting point for advanced students in need of a snapshot of the state of the art in philosophical research on dreaming and memory Chapters 2 10 and 16 are available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com) Dream Consciousness Nicholas Tranquillo,2014-09-01 This book presents three lectures by Allan Hobson entitled The William James Lectures on Dream Consciousness The three lectures expose the new psychology the new physiology and the new philosophy that derive from and support the protoconsciousness hypothesis of dreaming They review in detail many of the studies on sleep and dreaming conducted since the days of Sigmund Freud Following the lectures are commentaries written by scholars whose expertise covers a wide range of scientific disciplines including but not limited to philosophy psychology neurology neuropsychology cognitive science biology and animal sciences The commentaries each answer a specific question in relation to Hobson s lectures and his premise that dreaming is an altered state of consciousness Capitalizing on a vast amount of data the lectures and commentaries provide undisputed evidence that sleep consists of a well organized sequence of subtly orchestrated brain states that undoubtedly play a crucial function in the maintenance of normal brain functions These functions include both basic homeostatic processes necessary to keep the organism alive as well as the highest cognitive functions including perception decision making learning and consciousness Soul, Psyche, Brain: New Directions in the Study of Religion and

Neuropsychology of Sleep and Dreaming John S. Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology **Dream Images** Jayne

Gackenbach, Anees A Sheikh, 2020-11-26 This new text is a state of the art collection of essays representing varying points of view about dreams and the major research conducted in dream therapy today Renewed interest into serious dream investigation in recent years has supplied a variety of conceptual and research applications into dream study At long last Dream Images A Call to Mental Arms brings these current works together in one complete comprehensive volume On the Evolution of Conscious Sensation, Conscious Imagination, and Consciousness of Self Robert G Kunzendorf, 2016-12-05

Philosophical thought experiments invoking inverted spectra zombies et cetera suggest that conscious sensations have no function and psychological studies finding no correlation between vivid visual imaging and visual problem solving suggest that conscious images have no function Furthermore both philosophical and psychological theories suggest that self consciousness has no function Countering such suggestions the post Darwinian double aspect theory which Professor Robert Kunzendorf s introduces in the first chapter of his monograph On the Evolution of Conscious Sensation Conscious Imagination and Consciousness of Self points to evolutionary functions of certain sensations youngling vivid images and self

consciousness Kunzendorf's second chapter presents evidence that the most primitive sensation pain the subjective aspect of free nerve endings or nociceptors has a survival promoting function But as the pressure nociceptor mutates into a touch receptor the heat nociceptor into temperature receptor and the chemical nociceptor into a taste receptor the painful qualia of these nociceptors evolve respectively into touch sensation temperature sensation or taste sensation painless sensations that add no survival benefit to their receptor's physical aspect Building on evidence that retinal receptors embodying visual qualia evolved from primitive eyespots responsive to injurious heat at a distance or painful light the third chapter presents evidence that visually imagined sensations are the subjective qualities of retinal receptors that are corticofugally innervated in warm blooded animals for the developmental purpose of testing cortically hypothesized sensory motor rules that have greater survival value than cold blooded stimulus response associations The fourth and final chapter focuses on self conscious reality testing and on visuo spatial self conceptualization and presents evidence that such manifestations of self awareness evolve only in those warm blooded animals whose rule developing youth lasts two years or longer that is those mammals and birds whose survival during the imaginal testing of rules is subjected to prolonged risk if self consciousness that one is imaging sensations rather than perceiving sensations is absent
