Computational Science and Its Applications - ICCSA 2008 Osvaldo Gervasi, Beniamino Murgante, Antonio

Laganà, David Taniar, Youngsong Mun, 2008-06-28 This two volume set is assembled following the 2008 International Conference on Computational Science and Its Applications ICCSA 2008, a premium international event held in Perugia, Italy, from June 30 to July 3, 2008. The collection of fully refereed high quality original works accepted as theme papers for presentation at ICCSA 2008 are published in this LNCS proceedings set. This outstanding collection complements the volume of workshop papers traditionally published by IEEE Computer Society. The continuous support of computational science researchers has helped ICCSA to become a firmly established forum in the area of scientific computing, and the conference itself has become a recurring scientific and professional meeting that cannot be given up. The computational science field, based on fundamental disciplines such as mathematics, physics, and chemistry, is finding new computational approaches to foster human progress in heterogeneous and fundamental areas such as aerospace and automotive industries, bioinformatics, and nanotechnology. Studies, networks, and grid computing, computational geometry, and biometrics, computer education, virtual reality, and art. Due to the growing complexity of many challenges in computational science, the use of sophisticated algorithms and emerging technologies is inevitable. Together, these far-reaching scientific areas help to shape this conference in the areas of state-of-the-art computational science research and applications, encompassing the facilitating theoretical foundations and the innovative applications of such results in other areas. Knowledge Acquisition, Modeling and Management Rudi Studer,2003-06-29 Past Present and Future of Knowledge Acquisition This book contains the proceedings of the 11th European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May of 1999 This continuity and the high number of sessions reflect the mature status of the knowledge acquisition community Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems now called knowledge based systems Acquiring knowledge from a human expert

Various methods and tools have been developed to improve this process These approaches significantly reduced the cost of developing knowledge based systems However these systems often only partially fulfilled the task they were developed for and maintenance remained an unsolved problem This required a paradigm shift that views the development process of knowledge based systems as a modeling activity Instead of simply transferring human knowledge into machine readable code building a knowledge based system is now viewed as a modeling activity A so called knowledge model is constructed in interaction with users and experts This model need not necessarily reflect the already available human expertise Instead it should provide a knowledge level characterization of the knowledge that is required by the system to solve the application task Economy and quality in system development and maintainability are achieved by reusable problem solving methods and ontologies The former describe the reasoning process of the knowledge based system i.e. the algorithms it uses and the latter describe the knowledge structures it uses i.e. the data structures Both abstract from specific application and domain specific circumstances to enable knowledge reuse
