Origins of a Creole Bart Jacobs,2012-05-29 This study embarks on the intriguing quest for the origins of the Caribbean creole language Papiamentu In the literature on the issue widely diverging hypotheses have been advanced but scholars have not come close to a consensus The present study casts new and long lasting light on the issue putting forward compelling interdisciplinary evidence that Papiamentu is genetically related to the Portuguese based creoles of the Cape Verde Islands Guinea Bissau and Casamance Senegal Following the trans Atlantic transfer of native speakers to Cura ao in the latter half of the 17th century the Portuguese based proto variety underwent a far reaching process of relexification towards Spanish affecting the basic vocabulary while leaving intact the original phonology morphology and syntax Papiamentu is thus shown to constitute a case of language contact reduplicated in that a creole underwent a second significant restructuring process relexification These explicit claims and their rigorous underpinning will set standards for both the study of Papiamentu and creole studies at large and will be received with great interest in the wider field of contact linguistics **Tercentenary**

Contemporary cities face phenomenal risks and they face particularly high levels of mounting social and environmental risks including social polarization urban conflicts riots terror and climate change threats This book suggests that climate change and its resulting uncertainties challenge the concepts procedures and scope of conventional approaches to planning creating a need to rethink and revise current planning methods Therefore this book suggests a paradigm shift in our thinking interrogation and planning of our cities Based on the contemporary conditions of risk at cities this book conceptualizes the risk city as a construct of three interlinked concepts of risk trust and practice It is a construct of risk and its new evolving conditions and knowledge of uncertainties stem from climate change and other risks and uncertainties As a construct of practices the risk city produces social and political institutional framework and promotes practices accordingly in order to reduce risk and risk possibilities and to increase trust In light of the complex challenges and risks to the human habitat that have emerged in recent years many cities have prepared various types of plans aimed at addressing the challenges posed by climate change Nonetheless despite the importance of these plans and the major public resources invested in their formulation we still know little about them and have yet to begin studying them and assessing their contributions From the innovative perspective of the risk city this book asks critical questions about the nature vision practices and potential impact of the recent climate change oriented plans What kinds of risks do they attempt to address what types of practices do they institute and what types of approaches do they apply Do they adequately address the risks and uncertainties posed How do they contribute to the worldwide effort to reduce greenhouse gas emissions This book uses the methodologically innovative Risk City framework to examine the nature vision outcomes practices and impact of these crucial plans as well as their contribution to the resilience of our cities and to global efforts toward reducing greenhouse gas emissions
