Joan Holt, 2017-03-06

The global trade of aquatic organisms for home and public aquariums along with associated equipment and accessories has become a multi billion dollar industry. Aquaculture of marine ornamental species still in its infancy is recognized as a viable alternative to wild collection as it can supplement or replace the supply of wild caught specimens and potentially help recover natural populations through restocking. This book collects into a single work the most up to date information currently available on the aquaculture of marine ornamental species. It includes the contributions of more than 50 leading scientists and experts on different topics relevant for the aquaculture of the most emblematic groups of organisms traded for reef aquariums. From clownfish to angelfish tangs and seahorses as well as corals anemones shrimps giant clams and several other reef organisms all issues related with the husbandry breeding and trade are addressed with explanatory schemes and illustrations being used to help in understanding the most complex topics addressed. Marine Ornamental Species Aquaculture is a key reference for scientists and academics in research institutes and universities public and private aquaria as well as for hobbyists. Entrepreneurs will also find this book an important resource as the culture of marine ornamental species is analyzed from a business oriented perspective highlighting the risks and opportunities of commercial scale aquaculture of marine ornamentals.

[Coastal Fishes of Southern Africa](#) Phillip C. Heemstra, Elaine Heemstra, 2004. A guide to over 400 species of the fishes along the coast of southern Africa. This work features over 600 original paintings showing changes with growth and sexual differences in colour of many of the fishes. The species accounts include descriptions and other information for identification and comparison of similar species.

Teske, Geng Qin, Olivia Roth, Emily Rose, 2023-11-27

Syngnathids are a large and diverse group of fishes including seahorses pipefishes seadragons and pipehorses. These iconic and vulnerable fishes are distributed worldwide in warm temperate to tropical environments usually in coastal shallow water. Most species are marine and strongly associated with vegetal communities or coral reefs which provide shelter and the necessary dietary resources. Syngnathids have a unique reproductive mode with parental care diverse brooding structures and other special characteristics that make them highly vulnerable. These iconic fishes are facing several threats namely environmental disturbances and habitat regression. However many of their biological ecological and physiological characteristics have been poorly investigated and limited to a few species. Despite their vulnerability to date a large number of species are listed as

Data Deficient meaning they could potentially be threatened by IUCN due to inadequate or insufficient information mainly on distribution and or population status Due to the progressive regression of wild populations long term monitoring programs are necessary to evaluate population dynamics fisheries and habitat quality On the other hand these charismatic fishes especially seahorses are excellent flagship species for marine biodiversity conservation Unfortunately illegal harvesting and traffic of seahorses and other syngnathids is a fact despite CITES controls Hence the development of new tools for fish traceability and updated policies are also necessary to reduce the threats to these fishes
