Search Algorithms and Applications Nashat Mansour, 2011-04-26 Search algorithms aim to find solutions or objects with specified properties and constraints in a large solution search space or among a collection of objects A solution can be a set of value assignments to variables that will satisfy the constraints or a sub structure of a given discrete structure In addition there are search algorithms mostly probabilistic that are designed for the prospective quantum computer This book demonstrates the wide applicability of search algorithms for the purpose of developing useful and practical solutions to problems that arise in a variety of problem domains Although it is targeted to a wide group of readers researchers graduate students and practitioners it does not offer an exhaustive coverage of search algorithms and applications The chapters are organized into three parts Population based and quantum search algorithms Search algorithms for image and video processing and Search algorithms for engineering applications
