A Scientific Search for Altruism C. Daniel Batson, 2018-10-19 For centuries the egoism altruism debate has echoed through Western thought Egoism says that the motivation for everything we do including our seemingly selfless acts of care for others is to gain one or another self benefit Altruism while not denying the force of self interest says that under certain circumstances we can care for others for their sakes not our own Over the past half century social psychologists have turned to laboratory experiments on humans to provide a scientific resolution of this debate about our nature The experiments have focused on the possibility that empathic concern other oriented emotion elicited by and congruent with the perceived welfare of someone in need produces altruistic motivation to remove that need With carefully constructed experimental designs these scientists have tested the nature of the motivation produced by empathic concern determining whether it is egoistic or altruistic and thereby providing an answer to a fundamental question about what makes us tick Framed as a detective story this book traces the scientific search for altruism through numerous studies and attempts to examine various motivational suspects reaching the improbable conclusion that empathy induced altruism is indeed part of our nature The book then considers the implications of this conclusion both for our understanding of who we are as humans the bad news as well as the good and for how we might create a more humane society

Paipetis,2008-10-20 In the Homeric Epics important references to specific autonomous systems and mechanisms of very advanced technology such as automata and artificial intelligence as well as to almost modern methods of design and production are included Even if those features of Homeric science were just poetic concepts which on many occasions does not explain the astonishing details of design and manufacture like the ones included in the present volume they seem to prove that these achievements were well within human capability In addition the substantial development of machine theory during the early post Homeric age shows that the Homeric descriptions were a kind of prophetic conception of these machines and scientific research must be a quest for the fundamental principles of knowledge available during the Late Bronze Age and the dawn of the Iron Age Such investigations must of necessity be strongly interdisciplinary and also proceed continuously in time since as science progresses new elements of knowledge are discovered in the Homeric Epics amenable to scientific analysis This book brings together papers presented at the international symposium Science and Technology in Homeric Epics which took place at Ancient Olympia in 2006 It includes a total of 41 contributions mostly original research papers covering diverse fields of science and technology in the modern sense of these words **Biennial Science and Technology Report to the Congress** United States.
