Seifert, Benoît F. Leleux, Christopher L. Tucci, 2008-01-25 Few would deny that small entrepreneurial firms play an important economic and social role Not only do they generate a significant number of jobs but they also contribute a large proportion of gross national product GNP Not all small firms qualify as entrepreneurial entities however While small refers mostly to size entrepreneurial refers to growth and a value creation

orientation The vast majority of small firms have no growth aspirations nor do they have the means and skills to grow As such they may still provide employment and local value but would not embrace the high potential aspirations of entrepreneurial ventures This book clearly addresses those entrepreneurs who are interested in leading high growth potential companies

Table 1 Growth Typology of Small Firms

Type of venture	Desired sales range	Future employees	Lifestyle
0 to 1 million	0 to 4	Smaller	high potential
1 million to 20 million	5 to 50	High potential	over 20 million
Over 50	High innovation technology based startups	assume a very special role in high growth entrepreneurship	

Although these startups constitute a comparatively low number of small businesses they produce proportionately far more jobs than their low and medium innovation counterparts The aim of achieving rapid growth is typically referred to as high expectation entrepreneurship An area of major concern to us is a fact revealed in the latest GEM report The rate of European high expectation entrepreneurial activity is among the lowest in the world

Device and Materials Modeling in PEM Fuel Cells Stephen J. Paddison, Keith S. Promislow, 2008-10-15 Computational studies on fuel cell related issues are increasingly common These studies range from engineering level models of fuel cell systems and stacks to molecular level electronic structure calculations on the behavior of membranes and catalysts and everything in between This volume explores this range It is appropriate to ask what if anything does this work tell us that we cannot deduce intuitively Does the emperor have any clothes In answering this question resolutely in the affirmative I will also take the liberty to comment a bit on what makes the effort worthwhile to both the perpetrators of the computational study hereafter I will use the blanket terms modeler and model for both engineering and chemical physics contexts and to the rest of the world The requirements of utility are different in the two spheres As with any activity there is a range of quality of work within the modeling community So what constitutes a useful model What are the best practices serving both the needs of the promulgator and consumer Some of the key comments are covered below First let me provide a word on my credentials for such commentary I have participated in and sometimes initiated a continuous series of such efforts devoted to studies of PEMFC components and cells over the past 17 years All that participation was from the experimental qualitative side of the effort
