*mrs. Edward Thomas* Jane Thomas (née Pinhorn),1848 **Computational Models of American Speech** Mary Margaret  
Withgott,Francine R. Chen,1993-03 A new perspective on phonetic variation is achieved in this volume through the  
construction of a series of models of spoken American English In the past computer theorists and programmers investigating  
pronunciation have often relied on their own knowledge of the language or on limited transcription data Speech recognition  
researchers on the other hand have drawn on a great deal of data but without examining in detail the information about

pronunciation the data contains The authors combine the best of each approach to develop probabilistic and rule based computational models of transcription data An ongoing controversy in studies of phonetic variation is the existence and proper definition of a phonetic unit The authors argue that assumptions about the units of spoken language are critical to a computational model Their computational models employ suprasegmental elements such as syllable boundaries stress and position in a unit called a metrical foot The use of such elements in modeling data enables the creation of better computational models for both recognition and synthesis technology This book should be of interest to speech engineers linguists and anyone who wishes to understand symbolic systems of communication B Jenkins Fred Moten,2010-01-05
