Health Psychology Gillian N. Penny,Paul Bennett,Mike Herbert,1994 The psychology of health is a rapidly expanding field within psychology It draws upon a number of areas of psychology for its theoretical base but whilst the contribution of social and cognitive psychology is widely acknowledged that of lifespan psychology is perhaps less well recognised However a lifespan perspective has much to offer the health psychologist in the search for a more comprehensive understanding of health and illness This book brings together European American and Australian researchers whose interests in health psychology can be located within a lifespan context The book explores the

relevance of developmental and ageing processes to such issues as health and illness perception illness prevention and health promotion the experience of chronic illness health and illness behaviour and the costs and consequences of illness It does so by addressing specific health concerns within each of five stages in the life cycle childhood adolescence early adulthood middle adulthood and old age Thus for example the implications of emergent sexuality for health are addressed within the section on adolescence psychological aspects of reproductive failure and the new technologies are considered within the section on early adulthood whilst issues of social support social control and health are explored in the section on old age Taken as a whole the book offers the reader an interesting and informative illustration of the ways in which a lifespan perspective can enhance our understanding of health and illness

Communication and Aging Jon F. Nussbaum, Loretta L. Pecchioni, James D. Robinson, Teresa L. Thompson, 2013-05-13 This text employs a communication perspective to examine the aging process and the ability of individuals to adapt successfully to aging It continues the groundbreaking work of the first edition emphasizing a life span approach toward understanding the social interaction that occurs during later life The edition provides a comprehensive update on the existing and emerging research within communication and aging studies and considers such topics as notions of successful aging positive and negative stereotypes toward older adults and health communication issues It raises awareness of the barriers facing elderly people in conversation and the importance such conversations have in elderly people's lives The impact of nonrelational processes such as hearing loss are considered as they impact relationships with others and affect the ability to age successfully The book is organized into 14 chapters Each chapter is written so that the reader is presented with an exhaustive review of the pertinent and recent literature from the social sciences As in the first edition when the literature is empirically based the communicative ramifications are then discussed Readers of this volume will gain greater understanding of the importance of their communicative relationships and how significant they remain across the life span Developed for students in communication psychology nursing social gerontology sociology and related areas Communication and Aging provides important insights on communication to all who are affected by the aging process

Perspectives On Loss John H. Harvey, 2014-01-14 Losses are integral to the human experience but they sometimes unfold in subtle ways Loss is not just about death but can encompass a number of situations such as those gradual losses experienced by the elderly loss of vision mental capacity or hope Intended to stimulate ideas and research in the new area of psychological aspects of loss this sourcebook collects the writing of a set of distinguished scholars representing psychology and related fields The author presents a case for a broadly construed field of loss both personal and interpersonal that would complement other fields such as death and dying traumatology and stress and coping No other volume is as comprehensive in its treatment of this intriguing subject The book begins with an introduction to the concept of loss and discusses the definition of the term and the salience of the topic in the general public in the 1990s Contributors were chosen to represent some of the most interesting current work on different types of loss and adaptation in

the whole of the social and behavioral sciences Contents cover such diverse subjects as loss in intimate relationships disability chronic illness genocide sports unemployment and homelessness The book concludes with a commentary section on loss theory and research *Health and Suffering in America* Robert T. Fancher, 2017-07-12 *Health and Suffering in America* analyzes how we came to see various forms of suffering as mental illness and argues that social and historical dynamics not scientific discovery gave us this notion Robert Fancher argues that the beliefs of mental health professionals have less to do with science than with the professions own values and ideologies The image we have of mental health care hides vast realms of unexamined assumptions In effect the author maintains that mental health consists of mental health professionals ideas about how people ought to live and act not discoveries about human nature The body of the book consists of detailed analyses and critiques of four influential American cultures of therapy psychoanalysis behaviorism cognitive therapy and biological therapy Fancher emphasizes how heavily their concepts and methods are determined by their cultures rather than by empirical data Furthermore our notions of mental health are not scientific discoveries but moral ideals Yet mental health workers often fail to understand this As a result they misunderstand their own authority and worse fail to subject their moral ideals to appropriate moral and cultural criticism The new introduction by the author explores how the rise of managed health care coalesces with insistence on parity for mental health problems supported by continuing claims that mental health care is science based **Positive Ageing and Human Resource Development** Diane Keeble-Ramsay, Andrew

Armitage, 2018-11-13 *Positive Ageing and Human Resource Development* seeks to introduce readers to some of the major cultural issues that the current demographic changes of the workforce as the national default retirement age within the UK has moved from 60 to 67 and beyond represent for the workplace This phenomenon is happening in other economies It recognises there are social shifts in terms of the psychological contract and expectations of different sets of workers Rather than seeking to extend ideas around multi generational research eg millennials and generation X Y it provides some contributions and commentary which may inform employers HR professionals and those interested in Human Resource Development HRD when considering how to plan for these challenges It considers the concerns that HRD thinking has largely been focussed upon the development of leaders or managing people rather than how such sociological shifts may impact upon the nature of work and subsequent productivity It recognises that many companies have failed to plan their people management strategies and talent management approaches to cope with this shift largely given their uncertainty how to address It takes a set of contributions then which focus upon different issues broadly based around age in order to provide illustrations of some of the areas for discourse of the lived experiences of those affected by the probability of working into their late 60s or potentially even late 70s Much of this is focussed around women s working lives as the impact of later working represents a number of peculiar issues around the valuing of women s work and its contributions
