Fernandes,2025-10-01 Cancer is one of the leading causes of death globally and although there is accumulating knowledge about the mechanisms of cancer development and progression the cancer burden continues to escalate This greatly impacts the patients their families communities and health systems In some instances cancer can be prevented If identified early it is more likely to respond to first line treatments like surgery radiotherapy hormonal treatments and more recent targeted biological therapies and immunotherapies However some cancers may develop resistance to therapies and when diagnosed in advanced stages or at relapse current therapies may be largely ineffective Therefore there is a need to better understand cancer and unveil new targets and approaches for treating it more effectively In this context immune evasion and altered cellular metabolism have emerged as hallmarks of cancer and hot topics in cancer research Unlike conventional cancer therapies novel approaches that promise to alleviate the current cancer burden are emerging New discoveries unveiled important targets for therapy translating to clinical practice namely immunotherapies which unfortunately are ineffective in several types of cancer and patients Recently metabolism shifts have been increasingly recognized as a target to improve cancer responses to chemotherapy and immunotherapy This Research Topic aims to highlight the most recent advances in the field of cancer therapy focusing on new approaches that go beyond traditional ones in the treatment of any type of cancer Main themes include but are not limited to Tumor microenvironment and metabolic modulation Novel targets for immunotherapy These approaches may include drug repurposing and advanced delivery strategies among others that will allow to advance precision medicine In this Research Topic we welcome submissions such as Brief Research Report Case Report Clinical Trial Mini Review Review Original Research and Systematic Review Our objective is to produce a high quality article collection covering new promising discoveries and innovative approaches either at the pre clinical or clinical levels

Drug Discovery and Antiaging Approaches for Human Longevity Chen, Jen-Tsung,2025-05-23 For years antiaging biology and genetics have been advanced through approaches of molecular biology particularly the technologies of high throughput multiple omics AI and accelerated computational biology and RNA based tools such as epigenetic regulation and CRISPR technology It has led to dramatic progress in drug discovery and the development of antiaging medicines and medical strategies The field of research on lifespan extending agents and their underlying molecular mechanisms remains minimal Traditional herbal medicines natural compounds antioxidants metabolites kinase inhibitors nuclear hormone receptors and G protein coupled receptor ligands present promising medical strategies for antiaging involving CRISPR based therapy gene therapy stem cell therapy and epigenetic drugs Further research into ethical and social issues may reveal effective strategies for antiaging medicines in medical practice Drug Discovery and Antiaging Approaches for Human Longevity explores
