Charge and Exciton Transport through Molecular Wires Laurens D. A. Siebbeles, Ferdinand C. Grozema, 2011-07-18 As functional elements in opto electronic devices approach the single molecule limit conducting organic molecular wires are the appropriate interconnects that enable transport of charges and charge like particles such as excitons within the device. Reproducible syntheses and a thorough understanding of the underlying principles are therefore indispensable for applications like even smaller transistors, molecular machines and light harvesting materials. Bringing together experiment and theory to enable applications in real life devices, this handbook and ready reference provides essential information on how to control and direct charge transport. Readers can therefore obtain a balanced view of charge and exciton transport covering characterization techniques such as spectroscopy and current measurements together with quantitative models. Researchers are thus able to improve the performance of newly developed devices while an additional overview of synthesis methods highlights ways of producing different organic wires. Written with the following market in mind: chemists, molecular physicists, materials scientists and electrical engineers.

Biomimetic Radical Chemistry and Applications Chrissy Sostomos Chatgililoglu, 2020-03-25 The enormous importance of free radical chemistry for a variety of biological events including ageing and inflammation has attracted a strong interest in understanding the related mechanistic steps at the molecular level. Modelling the free radical chemical reactivity of biological systems is an important research area. When studying free radical based chemical mechanisms, biomimetic chemistry and the design of established biomimetic models come into play to perform experiments in a controlled environment that is suitably designed to be in strict connection with cellular conditions. This Special Issue gives the reader a wide overview of biomimetic radical chemistry where molecular mechanisms have been defined and molecular libraries of products are developed to also be used as traces for the discovery of some relevant biological processes. Several subjects are presented with 12 articles and 6 reviews written by specialists in the fields of DNA, proteins, lipids, biotechnological applications and bioinspired synthesis having free radicals as a common denominator.
