Lymphocyte Stimulation Differential Sensitivity To Radiation Biochemical And Immunological Processes:

Lymphocyte Stimulation Amleto Castellani, 2012-12-06 This book is a collection of some of the papers presented at the EMBO Lecture Course on Lymphocyte stimulation differential sensitivity to radiation biochemical and immunological properties The Course was organized with the aim of fostering interactions between photoradiobiologists and immunologists interested in the problem of DNA damage and repair studied at the lymphocyte level The papers presented in this book are mainly centered on the problem of radiation sensitivity of lymphocytes in relation to DNA repair phenomena The radiation biology of human lymphocytes is dominated by two phenomena a high radiosensitivity of lymphocytes which die in interphase b PHA induced relative radioresistance of those cells which after stimulation escape the interphase death and eventually die in mitosis These phenomena constitute a good system to study some of the factors which control the response of human cells to irradiation In addition it is possible to correlate the development of the relative radioresistance in PHA stimulated lymphocytes with the biochemical changes connected with the transformation processes The papers presented in this book constitute a real contribution to the scientific knowledge in this field of research and suggest that lymphocytes could be a very interesting test material useful for measuring the DNA repair capability of human cells to furnish an indication of individual radiosensitivity in man

Near-Infrared Applications in Biotechnology Ramesh Raghavachari, 2020-06-16 This volume explores developments in techniques in diagnostics DNA sequencing bioanalysis of immunoassays and single molecule detection It promotes the measurement identification monitoring analysis and application of near infrared spectroscopy NIR to medical and pharmaceutical advances The text also considers noninvasive methods of NIR for successful cost effective and prompt diagnoses of diseases

Near-Infrared Dyes for High Technology Applications S. Daehne, Ute Resch-Genger, Otto S. Wolfbeis, 2012-12-06 This book summarizes the results of the NATO Advanced Research Workshop on Syntheses Optical Properties and Applications of Near Infrared NIR Dyes in High Technology Fields held at Trest Czech Republic from September 24 to 27 1997 It was attended by 52 scientists from 16 countries among them 18 participants from 8 Eastern Europe The Workshop has been stimulated by the great progress that has been made in utilizing NIR dyes in high technology areas This has been triggered by the availability of reliable vel small and inexpensive laser diodes emitting in the NIR region which raise the analytical detection limits by several orders of magnitude allow time resolved measurements for temporal discrimination between spectrally similar species and make possible miniaturization as well as remote sensing through space and by fiber optical techniques Furthermore NIR dyes proved to be vel important in other high technology fields such as laser physics optical recording techniques nonlinear optics biochemistty and medicine

DNA Repair and Mutagenesis in Eukaryotes W. Generoso, 2012-12-06 Not many years ago most discussion of mutation induction by physical and chemical agents concentrated on the initial lesions induced in the DNA with the implicit assumption that once the lesions were made they were converted almost automatically to mutations by relatively simple processes associated with

DNA replication The discovery of a variety of enzymatic processes that can repair these lesions the great increase in our understanding of the molecular steps involved in repair replication and recombination and the increasing availability of cells with genetic defects in these processes have led to the realization that mutation induction is a far more complex process than we originally thought Repair systems can remove lesions before they can be converted to mutation they can also convert initial lesions to secondary ones that are themselves mutagenic and they can remove potentially lethal lesions at the expense of making mutations The error avoiding systems associated with replication are themselves complex and may be caused to make mistakes in various ways These different pathways for mutation production and mutation avoidance are still being worked out in prokaryotes and are less well understood in eukaryotes This symposium shows however that very encouraging progress has been made in the last several years and the progress is now accelerating
