MicroRNAs miRNAs are small regulatory RNAs that play a crucial role in posttranscriptional gene regulation Over two  
thousand miRNAs have been identified in humans and many of them are conserved in other species miRNAs are implicated in  
fundamental cellular functions including development and disease In the last decade there has been an overwhelming  
amount of data contributing to the understanding of miRNA biogenesis and their target genes Moreover a significant amount  
of work has been carried out in developing miRNA biomarkers and therapeutics for various disease conditions RNA based  
markers and therapeutics have been proven to have a clinical impact and many of these miRNA based therapies are at  
various stages of human clinical trials and clinical applications Notably miRNAs are also found in exosomes and are  
considered to impart intercellular communication and function via several different modalities including tunneling nanotubes  
In spite of our understanding of miRNA biology and function there are many challenges in effectively using miRNAs as  
biomarkers and therapeutic agents in clinical applications In this Special Issue we are inviting reviews perspectives and  
original research articles to address some of these challenges Topics will include but are not limited to miRNA biogenesis  
clinical applications extracellular function biomarkers miRNA immune regulation signaling pathways and preclinical models
