important elements throughout the story but so are dramatic changes in tactics and armaments which mean the tank has an increasingly uncertain role in modern warfare

M113: American Armoured Personnel Carrier Ben Skipper, 2021-03-23 The M113 has become as much a recognizable part of the US military machine at war as the Bell UH 1 Iroquois and M16 assault rifle. Earning its stripes in the jungles and highlands of Vietnam it became the most widely armored vehicle of the campaign. Such was its prowess that the Viet Cong gave it the nickname Green Dragon on account of its ability to go virtually anywhere. Its groundbreaking aluminum hull gives the M113 a relatively low weight of 12 tons; this allows it to be easily transported by air and gives it an amphibious ability. The design was also easy to modify and can carry a range of support and indirect fire weapons. From mortars to ballistic missiles the M113 spawned a progeny of useful and innovative vehicles. The base M113 is lightly armored and safe against only the lightest of small arms fire and shell splinter. As a result a range of up armor packages have been used in the past from sandbags to complex applique armor. 80 000 M113s of all types have been produced and are in use with over 50 countries making it one of the most widely used armored fighting vehicles to be produced. Indeed such was its popularity that the US bought their final M113s as late as 2007. The M113 was designed and developed by the Ford Machinery Corporation (FMC) to replace the heavier and less reliable steel bodied M59 and M75 armored personnel carriers. It was specifically designed to be lighter, air portable and have amphibious capability. Carrying a crew of two driver and commander who manned the M113's only weapon a 50-cal machine gun, the M113 would transport 11 soldiers into combat before withdrawing to the rear. Powered initially by a V8 petrol engine the M113 would be continuously up-engined throughout its frontline and subsequent rear support lifespan. Changes included improved suspension, smoke dischargers and externally fitted fuel tanks. Other changes have included armored commander's turrets and slat armor. This *LandCraft* title looks at the M113's development where the FMC sought to utilize its chassis into as many roles as possible from smoke generators to flamethrowers. The book also looks at how the M113 was adapted for use by numerous overseas customers and how these are upgraded to suit local conditions. Finally the title looks at the M113's changing roles in the more sophisticated contemporary battlescape and how it's still providing service in theatres across the world in a variety of roles both combat and support. For the modeler there is nothing more important than the little things and this image-rich section of *LandCrafts* M113 title delivers the goods. Filled with crisp photos that show the M113's many details combined with helpful accompanying text, it forms an enviable visual guide for the enthusiast and modeler alike.

M48 Patton vs Centurion David R. Higgins, 2016-01-20 The Indo-Pakistani War of 1965 witnessed some of the largest tank battles since World War II, notably between India's British-made Centurion Mk 7s and the American-made M48 Pattons fielded by Pakistan. The two countries' tank regiments, many of which shared a proud legacy in the British Indian Army, fought one another in the difficult terrain of Jammu and Kashmir, the focus of a long-running dispute between India and Pakistan. The armored clashes at Asal Uttar, Chawinda and Phillora would demonstrate that the Centurion, with its powerful gun and lower profile, generally proved

superior to the faster lighter but overly complex Patton Featuring full colour artwork expert analysis and archive photographs this is the full story of the clash between two leading tanks of the Cold War era that were never designed to fight each other but rather to line up on battlefields as allies **Infantry** ,1988
