**Human Evolution** John L. Bradshaw, 2014-01-02 The last decade has seen an explosive burst of new information about human origins and our evolutionary status with respect to other species We have long been considered unique as upright bipedal creatures endowed with language the ability to use tools to think and introspect We now know that other creatures may be more or less capable of similar behaviour and that these human capacities in many cases have long evolutionary trajectories Our information about such matters comes from a diverse variety of disciplines including experimental and neuropsychology primatology ethology archaeology palaeontology comparative linguistics and molecular biology It is the interdisciplinary nature of the newly emerging information which bears upon one of the profoundest scientific human questions our origin and place in the animal kingdom whether unique or otherwise which makes the general topic so fascinating to layperson student and expert alike The book attempts to integrate across a wide range of disciplines an evolutionary view of human psychology with particular reference to language praxis and aesthetics A chapter on evolution from the appearance of life to the earliest mammals is followed by one which examines the appearance of primates hominids and the advent of bipedalism There follows a more detailed account of the various species of Homo the morphology and origin of modern H sapiens sapiens as seen from the archaeological palaeontological and molecular biological perspectives The origins of art and an aesthetic sense in the Acheulian and Mousterian through to the Upper Palaeolithic are seen in the context of the psychology of art Two chapters on language address its nature and realization centrally and peripherally the prehistory and neuropsychology of speech and evidence for speech and or language in our hominid ancestors A chapter on tool use and praxis examines such behaviour in other species primate and non primate the neurology of praxis and its possible relation to language Encephalization and the growth of the brain phylogenetically and ontogenetically and its relationship to intellectual capacity leads on finally to a consideration of intelligence social intelligence consciousness and self awareness A final chapter reviews the issues covered The book of around 70 000 words of text includes over 500 references over half of which date from 1994 or later

**Social Intelligence** Nathan Emery, Nicola Clayton, Christopher D. Frith, 2008 Why are humans so clever The Social intelligence hypothesis explores the idea that this cleverness has evolved through the increasing complexity of social groups Our ability to understand and control nature is a by product of our ability to understand the mental states of others and to use this knowledge to co operate or deceive These abilities have not emerged out of the blue They can be found in many social animals that co operate and compete with one another birds as well as mammals This book brings together contributions from an impressive list of authorities in the field appropriately concluding with a chapter by Nick Humphrey one of the pioneers in this field This volume examines social intelligence in many different animal species and explores its development evolution and the brain systems upon which it depends Better

understanding and further development of social intelligence is critical for the future of the human race and the world that we inhabit Our problems will not be solved by mere cleverness but by increased social co operation

**Origins of Intelligence** Sue Taylor Parker, Michael L. McKinney, 2021-04-27 A look at the origins of cognitive abilities in primate species Since Darwin s time comparative psychologists have searched for a good way to compare cognition in humans and nonhuman primates In Origins of Intelligence Sue Parker and Michael McKinney offer such a framework and make a strong case for using human development theory both Piagetian and neo Piagetian to study the evolution of intelligence across primate species Their approach is comprehensive covering a broad range of social symbolic physical and logical domains which fall under the all encompassing and much debated term intelligence A widely held theory among developmental psychologists and social and biological anthropologists is that cognitive evolution in humans has occurred through juvenilization the gradual accentuation and lengthening of childhood in the evolutionary process In this work however Parker and McKinney argue instead that new stages were added at the end of cognitive development in our hominid ancestors coining the term adultification by terminal extension to explain this process Drawing evidence from scores of studies on monkeys great apes and human children this book provides unique insights into ontogenetic constraints that have interacted with selective forces to shape the evolution of cognitive development in our lineage The authors elegant theory and comprehensive empirical synthesis of how the development of human intelligence and brain evolved opens up cascading heuristic avenues for creatively answering one of the great questions in the human history of ideas Jonas Langer Human Development A handy source of information on comparative cognitive abilities related to life history and brain variables James Anderson Journal of the Royal Anthropological Institute

Transcendental Medication Christopher D. Lynn, 2022-04-28 Transcendental Medication considers why human brains evolved to have consciousness yet we spend much of our time trying to reduce our awareness It outlines how limiting consciousness rather than expanding it is more functional and satisfying for most people most of the time The suggestion is that our brains evolved mechanisms to deal with the stress of awareness in concert with awareness itself otherwise it is too costly to handle Defining dissociation as partitioning of awareness Lynn touches on disparate cultural and psychological practices such as religion drug use 12 step programs and dancing The chapters draw on biological and cultural studies of Pentecostal speaking in tongues and stress the results of our 800 000 years watching hearth and campfires and unconscious uses of self deception as mating strategy Written in a highly engaging style Transcendental Medication will appeal to students and scholars interested in mind altered states of consciousness and evolution It is particularly suitable for those approaching the issue from cultural biological psychological and cognitive anthropology as well as evolutionary psychology cognitive neuroscience and religious studies

Encyclopedia of the Sciences of Learning Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i e how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of

psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The Encyclopedia of the Sciences of Learning provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences
