Machine Translation A View From The Lexicon Artificial Intelligence:

Machine Translation Bonnie Jean Dorr,1993 This book describes a novel cross linguistic approach to machine translation that solves certain classes of syntactic and lexical divergences by means of a lexical conceptual structure that can be composed and decomposed in language specific ways This approach allows the translator to operate uniformly across many languages while still accounting for knowledge that is specific to each language **Machine Translation: From**

Research to Real Users Stephen D. Richardson,2003-06-30 AMTA 2002 From Research to Real Users Ever since the showdown between Empiricists and Rationalists a decade ago at TMI 92 MT researchers have hotly pursued promising paradigms for MT including data driven approaches e g statistical example based and hybrids that integrate these with more traditional rule based components During the same period commercial MT systems with standard transfer architectures have evolved along a parallel and almost unrelated track increasing their coverage primarily through manual update of their lexicons we assume and achieving much broader acceptance and usage principally through the medium of the Internet Webpage translators have become commonplace a number of online translation services have appeared including in their offerings both raw and postedited MT and large corporations have been turning increasingly to MT to address the exigencies of global communication Still the output of the transfer based systems employed in this expansion represents but a small drop in the ever growing translation marketplace bucket *Artificial Intelligence* R. B. Mishra,2010-10 This book has been

written keeping in view the requirements of undergraduate and postgraduate students and research scholars in the area of computer science and engineering in particular and other branches of engineering which deal with the study of AI such as electronics engineering electrical engineering industrial engineering robotics and FMS Besides the engineering students the postgraduate students of computer science and computer applications and cognitive sciences researchers can equally benefit from this text The basic concepts of artificial intelligence together with knowledge representation reasoning methods acquisition management and distributed architecture have been nicely and instructively described The various application domains and disciplines in engineering management medicine which cover different aspects of design assembly and monitoring have been presented with utility aspects of AI concepts in logic and knowledge The book maintains a simple and comprehensible style of presentation for the different categories of readers such as students researchers and professionals for their respective uses *Intelligent Language Tutors* V. Melissa Holland,Jonathan D. Kaplan,Michelle R. Sams,2014-01-09

The techniques of natural language processing NLP have been widely applied in machine translation and automated message understanding but have only recently been utilized in second language teaching This book offers both an argument for and a critical examination of this new application with an examination of how systems may be designed to exploit the power of NLP accommodate its limitations and minimize its risks This volume marks the first collection of work in the U S and Canada that incorporates advanced human language technologies into language tutoring systems covering languages as diverse as Arabic

Spanish Japanese and English The book is organized into sections that express the levels of analysis dealt with in learning and teaching a language and with the tasks of the student as writer reader conversant and actor in the world These sections bring together research by specialists in linguistics artificial intelligence psychology instructional design and language teaching In addition to providing detailed descriptions of working systems amply illustrated with screens from lesson and authoring interfaces the contributors address a spectrum of common issues What can current NLP technology contribute to computer assisted language instruction and to research on language learning How can this technology meet the demands of pedagogical theory for communicative language teaching in authentic contexts How can designers constrain tutoring environments to ensure accurate analysis of learners language What can NLP based systems teach us about language acquisition about linguistic theory and about theories of language pedagogy What lessons have been learned in using these systems to date Discipline specific issues are illuminated as well the relative merits of the major syntactic frameworks for NLP based language tutoring the adaptation of theories like lexical conceptual structure to support semantic interpretation the integration of input language with visual microworlds and dialogue games the pragmatics of the tutoring discourse the selection of instructional principles to guide system design and the accomodation of design to individual differences and learner styles A concluding section assesses this work from larger theoretical and practical perspectives experimental psychology and psycholinguistics linguistics language teaching and second language acquisition research

Incremental Speech Translation Jan W. Amtrup, 2003-06-26 Human language capabilities are based on mental procedures that are closely linked to the time domain Listening understanding and reacting on the one hand as well as planning formulating and speaking on the other are performed in a highly overlapping manner thus allowing inter human communication to proceed in a smooth and fluent way Although it happens to be the natural mode of human language interaction incremental processing is still far from becoming a common feature of today's language technology Instead it will certainly remain one of the big challenges for research activities in the years to come Usually considered difficult to a degree that renders it almost intractable for practical purposes incremental language processing has recently been attracting a steadily growing interest in the spoken language processing community Its notorious difficulty can be attributed mainly to two reasons Due to the inaccessibility of the right context global optimization criteria are no longer available This loss must be compensated for by communicating larger search spaces between system components or by introducing appropriate repair mechanisms In any case the complexity of the task can easily grow by an order of magnitude or even more Incrementality is an almost useless feature as long as it remains a local property of individual system components The advantages of incremental processing can be effective only if all the components of a producer-consumer chain consistently adhere to the same pattern of temporal behavior

Advances in Computers, 1999-09-14 Since its first volume in 1960 Advances in Computers has presented detailed coverage of innovations in hardware and software and in computer theory design and applications It has also

provided contributors with a medium in which they can examine their subjects in greater depth and breadth than that allowed by standard journal articles As a result many articles have become standard references that continue to be of significant lasting value despite the rapid growth taking place in the field

Machine Translation: From Real Users to Research Robert E. Frederking, Kathryn B. Taylor, 2004-09-21 The previous conference in this series AMTA 2002 took up the theme From Research to Real Users and sought to explore why recent research on data driven machine translation didn't seem to be moving to the marketplace As it turned out the first commercial products of the data driven research movement were just over the horizon and in the intervening two years they have begun to appear in the marketplace At the same time rule based machine translation systems are introducing data driven techniques into the mix in their products Machine translation as a software application has a 50 year history There are an increasing number of exciting deployments of MT many of which will be exhibited and discussed at the conference But the scale of commercial use has never approached the estimates of the latent demand In light of this we reversed the question from AMTA 2002 to look at the next step in the path to commercial success for MT We took user needs as our theme and explored how or whether market requirements are feeding into research programs The transition of research discoveries to practical use involves technical questions that are not as sexy as those that have driven the research community and research funding Important product issues such as system customizability computing resource requirements and usability and fitness for particular tasks need to engage the creative energies of all parts of our community especially research as we move machine translation from a niche application to a more pervasive language conversion process These topics were addressed at the conference through the papers contained in these proceedings and even more specifically through several invited presentations and panels

Assistive Technology and Artificial Intelligence Vibhu O. Mittal, 1998-07-15 This book constitutes a carefully arranged selection of revised papers on assistive technology first presented at related AAAI workshops between 1995 and 1998 The book is devoted to the advancement and use of AI stimulated technology that can help users extend their current range of cognitive and sensory abilities or overcome their motor disabilities Among various issues in the interdisciplinary area of assistive technology the papers address topics from natural language processing planning robotics user interface design computer vision and learning

The Human Factor in Machine Translation Sin-wai Chan, 2018-05-08 Machine translation has become increasingly popular especially with the introduction of neural machine translation in major online translation systems However despite the rapid advances in machine translation the role of a human translator remains crucial As illustrated by the chapters in this book man machine interaction is essential in machine translation localisation terminology management and crowdsourcing translation In fact the importance of a human translator before during and after machine processing cannot be overemphasised as human intervention is the best way to ensure the translation quality of machine translation This volume explores the role of a human translator in machine translation from various perspectives affording a comprehensive look at

this topical research area This book is essential reading for anyone involved in translation studies machine translation or interested in translation technology

Machine Translation and the Information Soup David Farwell, Laurie Gerber, Eduard Hovy, 2003-06-29 Machine Translation and the Information Soup Over the past fty years machine translation has grown from a tantalizing dream to a respectable and stable scienti c linguistic enterprise with users c mercial systems university research and government participation But until very recently MT has been performed as a relatively distinct operation so what isolated from other text processing Today this situation is changing rapidly The explosive growth of the Web has brought multilingual text into the reach of nearly everyone with a computer We live in a soup of information an increasingly multilingual bouillabaisse And to partake of this soup we can use MT systems together with more and more tools and language processing technologies information retrieval engines tomatod text summarizers and multimodal and multilingual displays Though some of them may still be rather experimental and though they may not quite t together well yet it is clear that the future will o er text manipulation systems that contain all these functions seamlessly interconnected in various ways

Machine Translation and the Lexicon Petra Steffens, 1995-03-06 This volume constitutes the proceedings of the Third International Workshop of the European Association for Machine Translation held in Heidelberg Germany in April 1993 The EAMT Workshops traditionally aim at bringing together researchers developers users and others interested in the field of machine or computer assisted translation research development and use The volume presents thoroughly revised versions of the 15 best workshop contributions together with an introductory survey by the volume editor The presentations are centered primarily on questions of acquiring sharing and managing lexical data but also address aspects of lexical description

Computational Linguistics and Intelligent Text Processing Alexander Gelbukh, 2005-01-31 This book constitutes the refereed proceedings of the 6th International Conference on Computational Linguistics and Intelligent Text Processing CICLing 2005 held in Mexico City Mexico in February 2005 The 53 revised full papers and 35 revised short papers presented together with 4 invited papers were carefully reviewed and selected from 151 submissions The papers are organized in topical sections on computational linguistics forum semantics and discourse parsing and syntactic disambiguation morphology anaphora and conference word sense disambiguation lexical resources natural language generation machine translation speech and natural language interfaces language documentation information extraction information retrieval question answering summarization

text classification categorization and clustering named entity recognition language identification and spelling and style checking

Word Sense Disambiguation Eneko Agirre, Philip Edmonds, 2007-11-16 Graeme Hirst University of Toronto Of the many kinds of ambiguity in language the two that have received the most attention in computational linguistics are those of word senses and those of syntactic structure and the reasons for this are clear these ambiguities are overt their resolution is seemingly essential for any practical application and they seem to require a wide variety of methods and knowledge sources with no pattern apparent in what any particular stance requires Right at the birth of artificial intelligence in his 1950 paper *Computing machinery and intelligence* Alan Turing saw the ability to understand language as an essential test of intelligence and an essential test of language understanding was an ability to disambiguate his example involved deciding between the generic and specific readings of the phrase a winter's day The first generations of AI researchers found it easy to construct examples of ambiguities whose resolution seemed to require vast knowledge and deep understanding of the world and complex inference on this knowledge for example Pharmacists dispense with accuracy The disambiguation problem was in a way nothing less than the artificial intelligence problem itself No use was seen for a disambiguation method that was less than 100% perfect either it worked or it didn't Lexical resources such as they were were considered secondary to non linguistic common sense knowledge of the world

Building and Using Comparable Corpora for Multilingual Natural Language Processing Serge Sharoff, Reinhard Rapp, Pierre Zweigenbaum, 2023-08-23 This book provides a comprehensive overview of methods to build comparable corpora and of their applications including machine translation cross lingual transfer and various kinds of multilingual natural language processing The authors begin with a brief history on the topic followed by a comparison to parallel resources and an explanation of why comparable corpora have become more widely used In particular they provide the basis for the multilingual capabilities of pre trained models such as BERT or GPT The book then focuses on building comparable corpora aligning their sentences to create a database of suitable translations and using these sentence translations to produce dictionaries and term banks Then it is explained how comparable corpora can be used to build machine translation engines and to develop a wide variety of multilingual applications

Dependenz und Valenz/ Dependency and Valency Vilmos Agel, Ludwig M. Eichinger, Hans Werner Eroms, Peter Hellwig, Hans Jürgen Heringer, Henning Lobin, 2003 Annotation The handbook provides an overview of the current status of this research In its first volume the handbook begins by presenting the historical background of the theories in which the conceptions are rooted and then goes on to deal with the individual elements
