Mechanisms of Lymphocyte Activation and Immune Regulation VI Sudhir Gupta,J. John Cohen,2013-06-29 Since programmed cell death was first described in insects in 1964 and apoptosis was described in 1972 rapid progress has been made in understanding the basic mechanisms and genes regulating programmed cell death and apoptosis In addition defects in various genes regulating programmed cell death have been delineated in several experimental models of human diseases This volume surveys various aspects of these rapidly developing areas of research in programmed cell death apoptosis This volume should be of interest to basic immunologists and molecular biologists The volume begins with a historical perspective of cell death The remainder of the volume is divided into four different parts Part I deals with the signaling pathways in apoptosis including cell cycle control of apoptosis role of ceramide in apoptosis role of antibody signaling and biochemical regulation of apoptosis The mechanisms for recognition of apoptotic lymphocytes by macrophages are also reviewed Part II examines the role of various genes that regulate apoptosis including the role of Fas FasL and other TNF family members in apoptosis and homeostatic regulation of immune response Recently described splice variants and their influence on apoptosis are also reviewed and the role of the members of the Bcl 2 family in apoptosis is discussed in detail Part III reviews various aspects of apoptosis in B lymphocytes including mechanisms that regulate apoptosis survival of B lymphocytes and the regulation of Fas mediated apoptosis in B lymphocytes

Mechanisms of Lymphocyte Activation and Immune Regulation Sudhir Gupta,William E. Paul,Anthony Fauci,2013-11-11 During the past 5 years rapid progress has been made in the understanding of biochemical pathways for signal transduction in lymphocyte activation Gene cloning technology has been instrumental in defining and making available in pure form of a number of growth and differentiation factors in the characterization of their receptors and in the delineation of genes for the T cell receptor This book is divided into 6 sections Section 1 deals with the molecular structure of the T cell receptor Section 2 discusses the role of the T cell receptor membrane ion channels and biochemical pathways of signal transduction in T cell activation The molecular structures and biological and immunological effects of interleukin 1 interleukin 2 and interleukin 3 are presented in Section 3 This section also details the structure of interleukin 2 receptor and its use as a target for therapy for certain leukemias Section 4 includes the biochemical events which occur following the delivery of the signal for B cell activation proliferation and differentiation by antigen growth differentiation factors The molecular structure of B cell stimulating factors is also discussed The role of oncogene expression in cellular activation and differentiation is included in Section 5 The cellular and molecular basis of natural killing and the molecular basis of cyclosporin A mediated immunosuppression are discussed in detail in Section 6 We hope this book will serve as a reference work on basic mechanisms of lymphocyte activation proliferation and differentiation for immunologists and molecular biologists

Copper Transport and Its Disorders Arturo Leone, Julian F.B. Mercer, 2012-12-06 This book is a compilation of presentations at the first meeting devoted to the molecular and cellular biology of copper transport When we first considered the possible program for the meeting we felt that a forum to integrate the recent advances in molecular understanding of copper transport with the older knowledge of copper metabolism was needed In addition we wished to have a strong emphasis on the diseases of copper including the genetic diseases Menkes and Wilson and other possible health

aspects of this metal seen from a molecular perspective Overall we were very happy with the success of the meeting and most participants were very enthusiastic Unfortunately we were not able to obtain manuscripts from every contributor but the selection in this book covers most of the topics discussed The history of biological research into copper dates from the latter half of the last century when the presence of copper as a component of living systems was first noted but it was not until the 1920s that the essential role of copper was first recognized I S McHargue found that plants and animals needed copper for optimal growth and health and proposed that copper was needed for life McHargue 1925 Other groups soon confirmed these observations in plants In animals the requirement of copper for hematopoiesis was discovered in 1928 Hart et al

Vasopressin and Oxytocin Hans H. Zingg, Charles W. Bourque, Daniel G. Bichet, 2012-12-06 This monograph provides a comprehensive overview of recent advances in the field of vasopressin and oxytocin In the summer of 1997 scientists from over 20 countries congregated in Montreal for the 1997 World Congress of Neurohypophyseal Hormones a conference that united the fields of vasopressin neurohypophysis and oxytocin in a single joint meeting that gave rise to the present book The organization of a joint meeting was prompted by several recent developments Specifically the molecular characterization of the vasopressin oxytocin receptor family made it mandatory to adopt an integrated view and to discuss the vasopressin oxytocin ligand receptor family as a whole To ensure emphasis on novelty the conference focused on advances made over the last two years and also included important contributions by scientists that had not previously been associated with the vasopressin oxytocin field Vasopressin and oxytocin are two neurohormones that exert a wide spectrum of central and peripheral actions Accordingly the vasopressin oxytocin field embraces a large number of different domains ranging from neuroscience endocrinology and oncology to renal reproductive and cardiovascular physiology and pathology
