Object Recognition In Man Monkey And Machine Cognition Special Issue:

Object Recognition in Man, Monkey, and Machine Michael J. Tarr, Heinrich H. Bulthoff, 1999-03-15 The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition These interconnected essays on three dimensional visual object recognition present cutting edge research by some of the most creative neuroscientific cognitive and computational scientists in the field Cassandra Moore and Patrick Cavanagh take a classic demonstration the perception of two tone images and turn it into a method for understanding the nature of object representations in terms of surfaces and the interaction between bottom up and top down processes Michael J Tarr and Isabel Gauthier use computer graphics to study whether viewpoint dependent recognition mechanisms can generalize between exemplars of perceptually defined classes Melvyn A Goodale and G Keith Humphrey use innovative psychophysical techniques to investigate dissociable aspects of visual and spatial processing in brain injured subjects D I Perrett M W Oram and E Ashbridge combine neurophysiological single cell data from monkeys with computational analyses for a new way of thinking about the mechanisms that mediate viewpoint dependent object recognition and mental rotation Shimon Ullman also addresses possible mechanisms to account for viewpoint dependent behavior but from the perspective of machine vision Finally Philippe G Schyns synthesizes work from many areas to provide a coherent account of how stimulus class and recognition task interact The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition

Object Categorization Sven J. Dickinson, 2009-09-07 This edited volume presents a unique multidisciplinary perspective on the problem of visual object categorization The result of a series of four highly successful workshops on the topic the book gathers many of the most distinguished researchers from both computer and human vision to reflect on their experience identify open problems and foster a cross disciplinary discussion with the idea that parallel problems and solutions have arisen in both domains Twenty seven of these workshop speakers have contributed chapters including fourteen from computer vision and thirteen from human vision Their contributions range from broad perspectives on the problem to more specific approaches collectively providing important historical context identifying the major challenges and presenting recent research results This multidisciplinary collection is the first of its kind on the topic of object categorization providing an outstanding context for graduate students and researchers in both computer and human vision

Perception of Faces, Objects, and Scenes Mary A. Peterson, Gillian Rhodes, 2003-05-22 From a barrage of photons we readily and effortlessly recognize the faces of our friends and the familiar objects and scenes around us However these tasks cannot be simple for our visual systems faces are all extremely similar as visual patterns and objects look quite different when viewed from different viewpoints How do our visual systems solve these problems The contributors to this volume seek to answer this question by exploring how analytic and holistic processes contribute to our perception of faces objects and scenes

Objects and Attention Brian J. Scholl, 2002 An overview of object based models of attention

The Handbook of

Multisensory Processes Gemma Calvert, Charles Spence, Barry E. Stein, 2004 Research is suggesting that rather than our senses being independent perception is fundamentally a multisensory experience This handbook reviews the evidence and explores the theory of broad underlying principles that govern sensory interactions regardless of the specific senses involved

The Organisation of Conceptual Knowledge in the Brain Alex Martin, Alfonso Caramazza, 2003 Category specific knowledge disorders are among the most intriguing and perplexing syndromes in cognitive neuropsychology The past decade has witnessed increased interest in these disorders due largely to a heightened appreciation of the profound implications that an understanding of concept representation has for such diverse topics as object recognition the organisation of the lexicon and storage of long term memories Until recently information about the representation of concepts was limited to findings from patients with brain injury and disease This state of affairs has now changed with the advent and wide spread availability of functional imaging for studying cognition in the normal human brain The purpose of this special issue is to provide a forum for new findings and critical theoretical analyses of existing data from patient and functional brain imaging studies The contributions all from major investigators in the field range from studies of specific object categories such as animals tools fruit and vegetables and faces to the more general domains of number processing social interaction and mechanical knowledge A unifying theme of these papers is the extent to which the findings can be best understood within the context of models that posit an innate domain specific organisation those that appeal to an organisation by sensory and motor based features and properties and those that propose an undifferentiated distributed neural organisation

Functional Features in Language and Space Laura Carlson, Laura Anne Carlson, Emile van der Zee, 2005 The language and space area is a relatively new research area in cognitive science Studying how language and spatial representation are linked in the human brain mainly draws on research in existing disciplines focusing on language perception categorization and development Representative researchers from these sub disciplines of cognitive science discuss new insights in their own field of expertise and show what role their definition of function feature or functional feature plays in their research New research centered around these concepts is on the forefront of developments in these sub disciplines and in the area of Language and Space

The Oxford Handbook of Thinking and Reasoning Keith J. Holyoak, Robert G.
