Petroleum Geology Of Libya:

Petroleum Geology of Libya Don Hallett, 2002-02-26 Libya has the largest petroleum reserves of any country in Africa and since production began in 1961 over 20 billion barrels of oil have been produced Libya is scheduled to reach the mid point of depletion of reserves in 2001 and this provides a timely point at which to review the state of petroleum exploration in Libya A large amount of data has been published on the geology of Libya but it is scattered through the literature much of the older data has been superceded and several of the key publications especially those published in Libya are difficult to find This book represents the first attempt to produce a comprehensive synthesis of the petroleum geology of Libva It is based exclusively on published data supplemented by the author's experience gained during ten years work in Libya The aim of the book is to systematically review the plate tectonics structural evolution stratigraphy geochemistry and petroleum systems of Libya and provides valuable new data on fields production and reserves This volume will provide a ready source of reference to individuals and companies who wish to obtain an overview of the petroleum geology of Libya and will save them the laborious task of sifting through hundreds of publications to find the data they require The book includes 148 newly drawn Petroleum Geology of Libya Don Hallett, Daniel Clark-Lowes, 2017-03-08 Petroleum Geology of Libya Second Edition systematically reviews the exploration history plate tectonics structural evolution stratigraphy geochemistry and petroleum systems of Libya and includes valuable new chapters on oil and gas fields production and reserves Since the previous edition published in 2002 there have been numerous developments in Libya including the lifting of sanctions a new licensing system with licensing rounds in 2004 2005 2006 and 2007 many new exploratory wells discoveries and field developments and a change of regime A large amount of new data has been published on the geology of Libya in the past fourteen years but it is widely scattered through the literature Much of the older data has been superseded and several of the key publications especially those published in Libya are difficult to access This second edition provides an updated source of reference which incorporates much new information particularly on petroleum systems reserves oil and gas fields play fairways and remaining potential It presents the results of recent research and a detailed description of Libyan offshore geology The book includes an extensive and comprehensive bibliography Presents over 180 full colour illustrations including maps diagrams and charts illustrating the key concepts in a clear and concise manner Authored by two recognized world authorities on geology in Libya with over 40 years experience in Libya between them Provides an expanded and updated version of the bestselling previous edition nicknamed the Explorationist's Bible Lays the foundation for the post revolution exploration age in Libya **3. Symposium on the Geology of Libya** Symposium on the Geology of Libya (3, 1987, Ţarābulus al-Ġarb),1991 **Geological Exploration in Murzuq Basin** D. Worsley, 2000-12-19 The Murzuq Basin is a large intracratonic sag basin located in southwestern Libya Exploration efforts started in this vast and remote Saharan region already in 1957 and 60 exploratory wells have been drilled to date resulting in over 20 discoveries with around 4 000 million

barrels of oil in place Most discoveries have been made in Ordovician sandstone reservoirs sourced by hot shales of the Lower Silurian Tanezzuft Formation Oil is already being produced and exported from the area but the basin s total hydrocarbon potential is still poorly understood Recent exploration especially the major discovery and initial development of the Giant Elephant Field has greatly increased interest for the area's potential Many petroleum geologists and companies now believe that the basin may well develop into a new major hydrocarbon province which will significantly contribute to Europe s energy needs in the next decades This book presents papers from a conference held at Sebha University on the eastern margins of the Murzug Basin in September 1998 The book continues an ongoing series of presentations of the geology of Libya but the 25 contributions herein mostly centre on the Murzuq Basin itself and on nearby areas There are still many unresolved questions in terms of geological and hydrocarbon exploration in these difficult desert areas but the papers herein will hopefully present a first comprehensive overview of an exciting frontier exploration region About half of the papers are directly related to hydrocarbon exploration and to source rock and reservoir development but a wide variety of other features are also described ranging from palaeontology and biostratigraphy to ore geology and water resources covering the entire geological column from the Precambrian to the Holocene The book concludes with a bibliography covering all geological aspects of this challenging but very promising frontier area Geology of North Africa Edward Tawadros, 2011-11-02 An expanded and updated edition of the original Geology of Egypt and Libya New chapters covering the geology of Algeria Tunisia and Morocco have been added to cover all of North Africa Petroleum systems are now also discussed and the history of geological exploration in Egypt and Libya Reviews tectonic elements geology of the Pan African Shield and Phanerozoic geological evolution of the five North African countries describes most of the lithostratigraphic units contains over 2500 references Petroleum Geology of the Murzug Basin, SW-Libya Abdulmonem Belaid, 2010

Charlotte Schreiber, S. Lugli, M. Babel, 2007 This book is an exploration of varying approaches to the study of the deposition diagenesis and stratigraphy of evaporites The volume includes papers from chemical modellers who work on the basis of geochemical

representations of the formative water bodies and from basin wide depositional stratigraphical modellers who propose depositional scenarios that are fitted to individual basinal pictures Until now there have been only a few studies of evaporite formation that explain the characteristic features we observe in the real rock record This volume is a collection of relevant papers in which these features are integrated in a realistic manner based on our new understanding of saline water bodies to the diverse tectonic chemical and depositional constraints of their individual basins In additional there are several review articles that offer oversight and extensive referencing of basins worthy of further study This book is a valuable resource for sedimentologists and stratigraphers looking for an up to date reference on evaporite deposits African Basins R.C. Selley, 1997-11-20 Following on from the first 2 books in the series Sedimentary Basins of the World which covered Chinese Sedimentary Basins Volume 1 and South Pacific Sedimentary Basins Volume 2 comes Volume 3 on African Basins Africa covers a larger land area than the USA Europe India and the ASEAN nations put together It is rich in natural resources including oil gas coal and nearly every metalliferous mineral Yet Africa is still one of the least explored continents This book brings together in one volume concise reviews of basins previously documented in a vast array of diffuse literature It also contains some of the first detailed accounts of several basins which have never before been described in such depth These include the onshore Owambo Iullemmeden and Sudanese rift basins and the offshore basins of southern Africa The contributions are by authors and teams of authors with great knowledge and experience of the basins that they describe The thirteen chapters are arranged in 3 parts covering North Africa Central Africa and Southern Africa and the book is illustrated by maps cross sections stratigraphic sections and seismic lines Each chapter includes a comprehensive bibliography and the book concludes with a subject index For academic geologists researching the geology of Africa and for industrial geologists seeking natural resources within African sedimentary rocks this book is an invaluable source of information **Sensing for Hydrocarbon Exploration** Andreas Laake, 2021-11-03 This book provides insights into the benefits of using remote sensing data from a geoscientist's perspective by integrating the data with the understanding of Earth's surface and subsurface In 3 sections the book takes a detailed look at what data explorationists use when they explore for hydrocarbon resources assess different terrain types for planning and hazards and extract present day geologic analogs for subsurface geologic settings The book presents the usage of remote sensing data in exploration in a structured way by detecting individual geologic features as building blocks for complex geologic systems This concept enables readers to build their own workflows for the assessment of complex geologic systems using various combinations of remote sensing data Section 1 introduces readers to the foundations of remote sensing for exploration covers various methods of image processing and studies different digital elevation and bathymetry models Section 2 presents the concept of geomorphology as a means to integrate surface and subsurface data Different aspects of rendering in 2D and 3D are explained and used for the interpretation and extraction of geologic features that are used in exploration Section 3 addresses remote sensing for

hydrocarbon exploration in detail from geophysical data acquisition to development and infrastructure planning The organization of this chapter follows an exploration workflow from regional to local modeling studying basin and petroleum system modeling as well as logistics planning of seismic surveys and near surface modeling Aspects of field development and infrastructure planning comprise multi temporal and dynamic modeling The section closes with a structured approach to extracting geologic analogs from interpreted remote sensing data The book will be of interest to professionals and students working in exploration for hydrocarbons and water resources as well as geoscientists and engineers using remote sensing for infrastructure planning hazard assessment and dynamic environmental studies Permo-Triassic Salt Provinces of Europe, North Africa and the Atlantic Margins Juan I.
