Petroleum System From Source To Trap:

The Petroleum System Leslie B. Magoon, Wallace G. Dow, 1994-01-01 The Biomarker Guide K. E. Peters, C. C. Walters, J. M. Moldowan, 2005 The second edition of The Biomarker Guide is a fully updated and expanded version of this essential reference From Source to Seep M. Lawson, M. J. Formolo, J. M. Eiler, 2018-03-28 Hydrocarbon systems by nature are a complex interplay of elements that must be spatially and temporally aligned to result in the generation and preservation of subsurface hydrocarbon accumulations To meet the increasing challenges of discovering hydrocarbon resources it is essential that we advance our understanding of these systems through new geochemical approaches and analytical developments Such development requires that academic and industry led research efforts converge in ways that are unique to the geosciences The aim of this volume is to bring together a multidisciplinary geochemical community from industry and academia working in hydrocarbon systems to publish recent advances and state of the art approaches to resolve the many remaining questions in hydrocarbon systems analysis From Source to Seep presents geochemical and isotopic studies that are grouped into three themes 1 source rock identification and the temperature timing of hydrocarbon generation 2 mechanisms and time scales associated with hydrocarbon migration trapping storage and alteration and 3 the impact of fluid flow on reservoir properties *Oil and Gas Resources in China: A Roadmap to 2050* Guangding Liu, Changchun Yang, Tianyao Hao, Xiaorong Luo, 2012-01-21 As one of the eighteen field specific reports comprising the comprehensive scope of the strategic general report of the Chinese Academy of Sciences this sub report addresses long range planning for developing science and technology in the field of oil and gas resources They each craft a roadmap for their sphere of development to 2050 In their entirety the general and sub group reports analyze the evolution and laws governing the development of science and technology describe the decisive impact of science and technology on the modernization process predict that the world is on the eve of an impending S T revolution and call for China to be fully prepared for this new round of S T advancement Based on the detailed study of the demands on S T innovation in China s modernization the reports draw a framework for eight basic and strategic systems of socio economic development with the support of science and technology work out China s S T roadmaps for the relevant eight basic and strategic systems in line with China s reality further detail S T initiatives of strategic importance to China s modernization and provide S T decision makers with comprehensive consultations for the development of S T innovation consistent with China s reality Supported by illustrations and tables of data the reports provide researchers government officials and entrepreneurs with guidance concerning research directions the planning process and investment Founded in 1949 the Chinese Academy of Sciences is the nation s highest academic institution in natural sciences Its major responsibilities are to conduct research in basic and technological sciences to undertake nationwide integrated surveys on natural resources and ecological environment to provide the country with scientific data and consultations for government s decision making to undertake government

Petrolipalynology Dexin Jiang, Eleanor I. Robbins, Yongdong Wang, Huiqiu Yang, 2015-10-05 This book addresses the principles and methods for determining petroleum source rocks based on fossil spores and pollen Studying petroliferous basins in China we discovered that there are often as many as three different sources of the microfossils the source rocks the rocks along the pathway and the reservoir rocks Therefore fossil spores pollen and algae from inland and coastal shelf petroliferous basins are analyzed and illustrated to show this complex process Furthermore the organic origin theory of oil is proven and environmental characteristics for hydrocarbon source rock formation are discussed Along with the geochronal and geographic distribution of non marine petroleum source rocks in China the mechanisms of petroleum migration following the pathways to the reservoirs are investigated It will be a valuable reference work as well as a textbook for a wider research areas ranging from stratigraphy palynology palaeontology and petroleum geology

Basin Modeling Kenneth E. Peters, David J. Curry, Marek Kacwicz, 2012-04-20 This special volume contains a selection of articles presented at the AAPG Hedberg Research Conference on Basin and Petroleum System Modeling BPSM held in Napa California on May 3-8 2009 P 1

Geochemical Investigations in Earth and Space Sciences R.J. Hill, J. Leventhal, Z. Aizenshtat, M.J. Baedeker, G. Claypool, R. Eganhouse, M. Goldhaber, K. Peters, 2004-06-16 This volume is the product of a technical session organized for the 2002

Geological Society of America Annual Meeting in recognition of Isaac Kaplan's many contributions to various fields of geochemistry. As Kaplan enters his sixth decade of scientific investigation, it is fair to say that his work has touched or influenced innumerable scientists either directly or indirectly. Readers of this volume are presented with a collection of 29 papers written by former students, post-doctoral researchers, friends, and colleagues from countries all over the world, including Sweden, Japan, Taiwan, New Zealand, Australia, Israel, and the United States, from the fields of stable isotope, forensic, environmental, and petroleum geochemistry, atmospheric chemistry, and cosmochemistry. The stable isotope section includes papers investigating climate change, diagenesis, recent sediment, and petroleum geochemistry and cosmochemistry problems. The forensic and environmental geochemistry section includes a variety of papers ranging from trace metals in soils to atmospheric CO₂ projections. The petroleum geochemistry section includes both basic research and applied geochemistry papers. The ancient and recent sediments section contains papers ranging from carbon flux in modern sediments to Precambrian microfossils. All of the articles together cover a broad range of geochemical studies and represent the diverse and distinguished career of Isaac Kaplan.

Geology and Hydrocarbon Potential of Neoproterozoic-Cambrian Basins in Asia G. M. Bhat, 2012. Geochemistry of Fossil Fuels Alain-Yves Huc, 2013. Understanding the origin and fate of hydrocarbons in the subsurface was the major endeavor of organic geochemists during the second half of the twentieth century. They succeeded to the point where the deciphered interplaying of elements and processes paved the way for the revolutionary concept of the petroleum system, a unifying paradigm that plays an important role in decision making associated with oil and gas exploration. The chemistry and physics involved have been addressed in a quantitative way and integrated into the other aspects of petroleum geology, giving rise to the development of numerical basin modeling. This book has been designed to offer an overview of different aspects of the geochemistry of fossil fuels, in particular the functioning of a petroleum system. In this respect, it can be viewed as a foundation for approaching basin modeling. This book will be of interest to a large audience, including specialists in the field, non-specialist professionals, and undergraduate and graduate students.

Shale oil resource play potential of the Green River Formation, Uinta Basin, Utah Steven Schamel, 2015-05-01. The Green River Formation in the Uinta Basin has many characteristics typical of an ideal shale oil resource play. It is a world-class oil-prone source rock. In nearly all parts of the basin, there are many thousands of net feet of Type I and Type II kerogen-rich calcareous mudstones, many intervals of which have average total organic carbon (TOC) of 5-10% or greater. In the north-central and western parts of the basin, a substantial part of the formation is in the oil generative window. Furthermore, organic maturation simulations done in this study using PRA BasinView 3D indicate early entry into the oil generative window. In the northwest parts of the basin, the lower Green River Formation was generating oil even

before the end of the Eocene and slowing of sediment accumulation in the basin The Green River Formation is unquestionably a superb petroleum system responsible for very large cumulative production of oil and associated natural gas and an even larger potential oil sand resource This DVD contains a 65 page report *U.S. Geological Survey Bulletin* Margo I.
