Practical Handbook of Microbiology Emanuel Goldman, Lorrence H Green, 2008-08-29 The field of microbiology has developed considerably in the last 20 years building exponentially on its own discoveries and growing to encompass many other disciplines Unfortunately the literature in the field tends to be either encyclopedic in scope or presented as a textbook and oriented for the student Finding its niche between these two poles

Bacteriophages Renos Savva, 2020-02-19 Bacteriophages are viruses that utilise bacterial cells as factories for their own propagation and as safe

havens for their genomic material They are capable of equipping bacteria with properties that bestow environmental advantages They are also capable of specifically and efficiently killing bacteria Bacteriophages are resilient in a wide diversity of environments presumed to be as ancient as life itself and are estimated to be the most numerous biological entities on the planet Their overarching capacity to survive via molecular adaptation is supported by an arsenal of encoded enzymatic tools which also enabled biotechnology This volume includes contributions that describe bacteriophages as nanomachines genetic engineers and also as medicines and technologies of the future including relevant production and process issues

Genetic Library Construction and Screening R.C. Bird, Bruce F. Smith, 2012-12-06 Designed as an introductory text the authors cover all core strategies in the application of modern recombinant DNA technology The first chapters directly address the applications of polymerase chain reaction to a variety of problems in DNA cloning that are or have been extremely challenging using more traditional approaches and technologies These include cDNA cloning and transcript mapping mutagenesis as well as the cloning of very long transcripts and protocols using limiting amounts of total RNA Further chapters describe approaches to subtractive cloning technologies as well as novel specialized expression cloning and library screening strategies The handbook contains detailed step by step protocols and extensive hands on advice

Recognition Receptors in Biosensors Mohammed Zourob, 2010-01-08 Recognition receptors play a key role in the successful implementation of chemical and biosensors Molecular recognition refers to non covalent specific binding between molecules one of which is typically a macromolecule or a molecular assembly and the other is the target molecule ligand or analyte Biomolecular recognition is typically driven by many weak interactions such as hydrogen bonding metal coordination hydrophobic forces van der Waals forces pi pi interactions and electrostatic interaction due to permanent charges dipoles and quadrupoles the polarization of charge distributions by the interaction partner leading to induction and dispersion forces and Pauli exclusion principle derived inter atomic repulsion and a strong attractive force arising largely from the entropy of the solvent and termed the hydrophobic effect In recent years there has been much progress in understanding the forces that drive the formation of such complexes and how these forces are related to the physical properties of the interacting molecules and their environment allows rational design of molecules and materials that interact in specific and desired ways This book presents a significant and up to date review of the various recognition elements their immobilization characterization techniques by a panel of distinguished scientists This work is a comprehensive approach to the recognition receptors area presenting a thorough knowledge of the subject and an effective integration of these receptors on sensor surfaces in order to appropriately convey the state of the art fundamentals and applications of the most innovative approaches

Peptides and Peptide-based Biomaterials and their Biomedical Applications Anwar Sunna, Andrew Care, Peter L. Bergquist, 2017-10-26 Solid binding peptides have been used increasingly as molecular building blocks in nanobiotechnology as they can direct the assembly and functionalisation of a diverse range of materials and have the ability to regulate the synthesis of nanoparticles

and complex nanostructures Nanostructured materials such as sheet fibril forming peptides and helical coiled coil systems have displayed many useful properties including stimulus responsiveness modularity and multi functionality providing potential technological applications in tissue engineering antimicrobials drug delivery and nanoscale electronics The current situation with respect to self assembling peptides and bioactive matrices for regenerative medicine are reviewed as well as peptide target modeling and an examination of future prospects for peptides in these areas Recombinant Antibodies for Infectious Diseases Theam Soon Lim,2018-03-16 There are many principles and applications of recombinant antibodies for infectious diseases The preferred technology associated to recombinant antibody generation is mainly phage display The adaptation of antibodies for infectious diseases is an area lacking information as most literature is focused on oncology or autoimmunity This project highlights the power and potential of antibody phage display for infectious diseases In addition to that supplementary information regarding technologies associated to antibody generation and engineering in the context of infectious disease will also help to provide greater insight to the potential of recombinant antibodies for infectious diseases
