you'll find in *Modeling Classic Combat Aircraft* easy to follow diagrams crisp photos concise instructions and the proven techniques that will help you complete realistic and dramatic showcase models Book jacket **The U.S. Combat Aircraft Industry, 1909-2000** Mark A. Lorell, 2003-10-29 Drawing on primary and secondary sources on the aircraft industry this report provides a brief survey of industry structure innovation and competition in the U S fixed wing combat aircraft industry from its earliest days to the present It supports a much larger research effort examining the future of the structure innovation and competition of the U S military aircraft industrial base that responds to congressional concerns about that future *The Cutting Edge* Mark A. Lorell, Hugh P. Levaux, 1998 The proposition that innovation is critical in the cost effective design and development of successful military aircraft is still subject to some debate RAND research indicates that innovation is promoted by intense competition among three or more industry competitors Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry the authors here examine the history of the major prime contractors in developing jet fighters since World War II They make use of an extensive RAND database that includes nearly all jet fighters fighter attack aircraft and bombers developed and flown by U S industry since 1945 as well as all related prototypes modifications upgrades etc The report concludes that 1 experience matters because of the tendency to specialize and thus to develop system specific expertise 2 yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders and 3 dedicated military R D conducted or directly funded by the U S government has been critical in the development of new higher performance fighters and bombers *Air Force Magazine* ,1996-07 *Current Literature* ,1897 **Flying Magazine** ,1970-03

Engineering the F-4 Phantom II Glenn E. Bugos, 1996 Conceived in 1953 in a chickenwire covered cubicle known as the advanced design cage at McDonnell Aircraft the F 4 Phantom II fighter bomber was produced for 25 years serving a full workload in Vietnam for the Navy Marines and Air Force and surviving through the 1990s in the air arms of eleven nations

While most case studies of modern aircraft focus on the many ways the military industrial complex goes wrong this trenchant invigorating study looks deeper at how those who built the complex intended it to work Step by step the reader discovers how the relationships among parts systems procedures economies and missions were shaped by relationships among people scientists engineers testers program managers subcontractors military strategists pilots and corporate leaders Drawing on exhaustive research including interviews with key players the author makes a major advance in the burgeoning body of literature on technology management by showing how McDonnell worked through the problems of technical integration that plagued defense engineering in the 1960s and 1970s and led to programs full of complexity It is as much a study of how aircraft manufacturers and military officers went about their business as it is a life and times history of an important aircraft
