## **Pharmacological Intervention In The Aging Process:**

*Pharmacological Intervention in the Aging Process* Jay Roberts, 2013-06-29 In the nearly three years that have elapsed since our first Philadelphia Symposium on Aging our activities and interactions have expanded We spent no small amount of time discussing the selection of a timely topic for our next symposium For the first symposium a variety of topics relating to the study of aging ranging from phenomena at the cellular level to phenomena in disease states were selected for consideration For the present symposium we thought it more desirable to concentrate on one area only in order to summarize available information discover what shortcomings exist and suggest new directions for research The paucity of information on pharmacological studies in aging and the compelling necessity for these studies made it clear to us that the time was appropriate for a review of this subject matter The approach was to consider topics related to the effects of aging on the basic properties of drug action and on the effectiveness of drugs used in the therapy of diseases in several organ systems Furthermore it was felt that by considering the various pharmacological methods of intervention in the aging process greater insight into the nature of aging would emerge For the symposium we brought together 13 outstanding workers in the field of pharmacology to discuss the selected topics We expect that the chapters will be informative to workers in pharmacology and in biomedical disciplines in general as well as provide a firm foundation for future work in this exciting area

## **Nutritional Intervention in the Aging Process**

H.J. Armbrecht, J.M. Prendergast, R.M. Coe, 2012-12-06 There has been much popular and scientific interest in the fields of nutrition and aging in recent years As the importance of proper nutrition in children and young adults becomes more fully understood it is natural to wonder if proper nutrition could play a similar role in later life Recent research has indicated that nutrition can potentially intervene in the aging process in at least two ways First studies in animals and humans have shown that nutrition can be used to improve functional status which in turn is related to perceived quality of life Second nutritional manipulation has been used to extend maximal life span in laboratory animals How these interesting findings apply to the human situation remains to be explored The purpose of this book is twofold The first is to present recent advances in our basic knowledge of how nutrition and aging interact with each other The second is to discuss some applications of this knowledge to the care of the elderly patient The interaction between aging and nutrition is complex because each may act on the other in either a synergistic or antagonistic fashion Aging may alter the nutritional status of the elderly by affecting the way nutrients are absorbed and utilized by the body Aging may also influence food intake and therefore nutritional status by decreasing the palatability of food The environment of the elderly may change so they are less likely to eat well balanced meals

in their respective fields They cover topics ranging from the optimization of drug dosing regimens in specialized populations to model based approaches in drug treatment among pediatrics Readers will also find A thorough introduction to considerations and regulatory affairs for clinical research in special populations Comprehensive explorations of drug disposition in geriatrics patients with hepatic insufficiency and patients with renal insufficiency Practical discussions of model based pharmacokinetic approaches Complete treatments of artificial intelligence in drug development Perfect for practicing pharmacologists pharmacists and clinical chemists Basics and Clinical Applications of Drug Disposition in Special Populations will also benefit medical professionals who provide medical and pharmaceutical care to special populations

Old Age and Agency Emmanuelle Tulle,2004 This book is about rethinking the ways in which we make sense of social action or agency in later life The contributions in this collection challenge traditional academic approaches to the study of later life which arguably often deny older people agency Social gerontology and the wider society should be more reflexive and rather than contribute to the continued marginalisation of older people should draw attention to the extent to which the latter s actions may be understood within the set of normalising discourses which people have to manage and negotiate as they get old The purpose of this collection is to continue this process by providing philosophical theoretical conceptual and empirical direction for a reflexive social gerontology This book argues that the management of later life has become complex caught as it is within a broad discourse which continues to construct old age as a time of decline and dependency but has shifted the burden of responsibility for the avoidance of decline on individuals
